Defendants.

Case No. 19-7651

**COMPLAINT**

**JURY TRIAL DEMANDED**

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 Plaintiffs Intel Corporation (“Intel”) and Apple Inc. (“Apple”), on personal knowledge as  
2 to their own acts, and on information and belief as to all other acts based on their own and their  
3 attorneys’ investigation, by and through their attorneys, allege as follows:

**INTRODUCTION**

5 1. Intel and Apple bring this action under Section 1 of the Sherman Act and Sections  
6 4, 7, and 16 of the Clayton Act, 15 U.S.C. §§ 1, 15, 18, and 26; under Cal. Bus. & Prof. Code  
7 § 17200 et seq.; and to prevent and restrain Defendants’ anticompetitive conduct and other  
8 violations of the law.

9 2. Rather than promote the progress of science and useful arts, patent assertion entities  
10 (“PAEs”), including Defendants, that aggressively pursue meritless litigation have long been  
11 recognized to harm and deter innovation. For example, one study estimated that patent litigation  
12 brought by PAEs in the United States resulted in expenditures of \$29 billion in 2011 for licensing  
13 fees, legal fees, and other costs of responding to PAE litigation.<sup>1</sup> Another study found, by looking  
14 at the impact on stock price, that lawsuits by PAEs from 1990 through 2010 were responsible for  
15 the defendants losing half a trillion dollars.<sup>2</sup> And those losses are not offset by corresponding  
16 gains to patent holders that promote innovation. One study found that the profits received by PAEs  
17 from litigation amounted to less than 10% of the lost share value of companies targeted by the  
18 PAEs.<sup>3</sup>

19 3. Based on such studies, the President’s Council of Economic Advisers, the National  
20 Economic Council, and the Office of Science & Technology Policy warned in a 2013 report that  
21 “Patent Assertion Entities . . . focus on aggressive litigation, using such tactics as: . . . creating  
22 shell companies that make it difficult for defendants to know who is suing them; and asserting that

28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 their patents cover inventions not imagined at the time they were granted.”<sup>4</sup> Further, the report  
2 concluded that PAEs “have had a negative impact on innovation and economic growth.”<sup>5</sup>

3 4. Recognition of the threat posed by improper patent assertions has led to judicial  
4 determinations clarifying the law and legislative changes with the potential to curb meritless  
5 litigation. In 2011, the U.S. Court of Appeal for the Federal Circuit struck down the overreaching  
6 presumption offered by Defendant Uniloc USA, Inc. (“Uniloc USA”) that, as a rule of thumb,  
7 infringement of a single patent warranted twenty-five percent of the product’s profit. The same  
8 year, Congress enacted the Leahy Smith America Invents Act, including *inter partes* review  
9 procedures through which the Patent Trial and Appeal Board (“PTAB”) of the U.S. Patent &  
10 Trademark Office (“USPTO”) can be asked to review whether issued patents are actually valid.  
11 And in 2014, the Supreme Court held in *Alice Corp. v. CLS Bank International*, 573 U.S. 208  
12 (2014), that inventions directed to abstract ideas could not be patented unless they contain an  
13 “inventive concept” beyond implementation of the abstract idea in computer code.

14 5. In 2016, the Council of Economic Advisers returned to the subject of PAEs,  
15 observing that research since 2013 continues to show “that a substantial amount of patent litigation  
16 in the United States, often with little substantive merit, often arises from certain types of NPEs  
17 [non-practicing entities] called ‘patent assertion entities.’”<sup>6</sup> But the Council noted that legislative  
18 and judicial actions, such as those described above, are “promising in that all of them should reduce  
19 the level of frivolous patent litigation.”<sup>7</sup>

20 6. In the face of these challenges, PAEs have evolved. PAEs have increasingly been  
21 partnering with investment firms to fuel their litigation. This trend is part of a larger trend in the  
22 growth of third-party investment in litigation generally. Although the precise scale of investment

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 in litigation is unknown, estimates put it in the tens of billions of dollars.<sup>8</sup> As one example, the  
2 largest litigation investor reported having investments of \$2.8 billion in 2019.<sup>9</sup>

3 7. Having deep-pocketed investment firms standing behind them has made PAEs only  
4 more aggressive. Indeed, to meet the expectations of their new investors for high returns, PAEs  
5 must act ever more aggressively. These new investors are content to incur loss after loss so long  
6 as they have the chance to hit a windfall reward that will justify their investment. Patent assertion  
7 thus becomes simply a numbers game disassociated from the merits of the underlying patents, with  
8 PAEs and their investors betting that serial assertions with aggressive demands will strike a jackpot  
9 eventually making up for many other losses. Consistent with this strategy, while the overall level  
10 of patent litigation may be declining, assertions by non-practicing entities are increasing.<sup>10</sup>

11 8. A central player in this emerging investment strategy is Fortress Investment Group  
12 LLC (“Fortress”). Fortress is an investment firm that went public in 2007. Fortress’s shares traded  
13 at over \$35 per share after going public, but one decade later, Fortress was struggling with poor  
14 returns and its share price had plummeted to around \$5 per share in 2017. Fortress was acquired  
15 that year by SoftBank Group Corp. (“SoftBank”) for \$3.3 billion. Fortress contends it is “a leading,  
16 highly diversified global investment manager”<sup>11</sup> and claims to have approximately \$39.2 billion  
17 of assets under management as of March 31, 2019. One way in which Fortress has tried to turn  
18 around its performance and justify SoftBank’s investment in it is through increased speculation on  
19 patent assertions.

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1           9. Intel and Apple bring this complaint to end a campaign of anticompetitive patent  
2 aggregation by Fortress and a web of PAEs that Fortress owns or controls. Fortress has used its  
3 stable of PAEs to aggregate a massive portfolio of patents that purportedly read on high-tech  
4 consumer and enterprise electronic devices and components or software therein and processes used  
5 to manufacture them. By employing a network of PAEs that it either owns or controls, Fortress  
6 has created a web of entities that obscures Fortress's puppeteering role in this scheme. Rather than  
7 enhancing efficiency, Fortress uses aggregation to undermine it by creating a structure in which  
8 Fortress and its PAEs benefit by asserting weak patents—i.e., those that never would have been  
9 asserted by their former owners—in order to stretch the resources of their targets and increase the  
10 possibility that those weak patents will improperly be found valid and infringed or the prospect  
11 that a target (like Intel or Apple) will agree to a license to resolve the threat posed by Fortress and  
12 its PAEs. Thus, rather than promoting the procompetitive benefits of the patent system by  
13 increasing innovation and output, Fortress's scheme has the opposite effect. Fortress and its PAEs  
14 acquire and seek to monetize meritless patents that never would have been asserted by their  
15 original owners, imposing a tax on the electronics industry that increases prices, decreases output,  
16 and ultimately harms consumers. To the extent that Fortress and the other Defendants have patents  
17 that would actually be of value to potential licensees, the transfer of those patents to Fortress's  
18 control limits access to them because those patents are now held by entities that have no incentive  
19 to license patents in a way that captures royalties that are commensurate with their actual value.  
20 Instead, those entities have incentives to obtain excessive monopoly rents by exploiting patent  
21 portfolios that aggregate any valuable patents with many meritless patents.

22           10. Through its anticompetitive aggregation scheme, Fortress has engaged in  
23 anticompetitive conduct by creating a portfolio of patents that purportedly read on electronic  
24 devices and components or software therein and processes used to manufacture them that allows  
25 it to charge far more than the value of the inventive contributions (if any) of the patents and of  
26 competitive prices for licenses. Fortress and its PAEs seek to use that ill-gotten power to extract  
27 and extort exorbitant revenues unfairly and anticompetitively from Intel, Apple, and other  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 suppliers of electronic devices or components or software for such devices and ultimately from  
2 consumers of those products. Fortress's aggregation is thus intended for an anticompetitive  
3 purpose—to invest in patents at costs lower than the holdup value of the patents to ensnare as many  
4 potential licensees as possible and to allow it and the other Defendants to assert as many possible  
5 claims of infringement to tax the commercial use of existing technology at rates beyond the actual  
6 value (if any) of the aggregated patents.

7 11. In furtherance of the anticompetitive scheme, Fortress and the other Defendants  
8 have deployed patents in waves of lawsuits against their targets without regard for the merits of  
9 the claims. Rather than licensing and litigating based on the merits of the patents, Fortress and its  
10 PAEs operate based on volume and repetition, targeting the resolve of the targets instead of  
11 establishing the merits and value of the patents. Given the size of the portfolio, Fortress and its  
12 PAEs can deploy patent after patent in case after case against their targets with the threat of ever  
13 more patent assertions and ever more litigation. Faced with this threat, many victims have agreed  
14 to settle, rather than to challenge Fortress and its PAEs, for amounts that reflect not the merits of  
15 the underlying patents but the effectiveness of the Fortress model. Thus, Fortress and the other  
16 Defendants foreclose the possibility—which existed before aggregation—that litigation can be an  
17 economic alternative to licensing patents.

18 12. Intel and Apple bring this action to remedy the harms that they have already  
19 suffered from Defendants' violations of federal antitrust and state unfair competition laws and to  
20 prevent further harm to themselves, the broader electronics industry, and U.S. consumers.

**PARTIES**

21  
22 13. Plaintiff Intel develops, manufactures, and sells integrated digital technology  
23 products. Intel is a corporation organized and existing under the laws of the State of Delaware,  
24 having its principal place of business within this District at 2200 Mission College Boulevard, Santa  
25 Clara, California.

26 14. Plaintiff Apple designs and sells innovative, iconic consumer electronics such as  
27 the iPhone, iPad, and MacBook. Apple is a corporation organized and existing under the laws of  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 the State of California with its principal place of business within this District at One Apple Park  
2 Way, Cupertino, California.

3 15. Defendant Fortress claims to be a Delaware limited liability company. Fortress  
4 does business and maintains an office within this District at One Market Plaza, Spear Tower, 42<sup>nd</sup>  
5 Floor, San Francisco, California.

6 16. Defendant Fortress Credit Co. LLC (“Fortress Credit”) claims to be a Delaware  
7 limited liability company with its principal place of business at 1345 Avenue of Americas, 46th  
8 Floor, New York, New York. Fortress Credit is registered with the California Secretary of State  
9 to do business in California and also maintains an office within this District at One Market Plaza,  
10 Spear Tower, 42<sup>nd</sup> Floor, San Francisco, California. Fortress Credit is an affiliate of Fortress.

11 17. Defendant Uniloc 2017 LLC (“Uniloc 2017”) claims to be a Delaware limited  
12 liability company with addresses at 1209 Orange Street, Wilmington, Delaware; 620 Newport  
13 Center Drive, Newport Beach, California; and 102 N. College Avenue, Suite 303, Tyler, Texas.

14 18. Defendant Uniloc USA claims to be a Texas corporation with a principal place of  
15 business at Legacy Town Center I, Suite 380, 7160 Dallas Parkway, Plano, Texas. Uniloc USA is  
16 registered with the California Secretary of State to do business in California and also maintains an  
17 office in Newport Beach, California, where it conducts strategy meetings.

18 19. Defendant Uniloc Luxembourg, S.à.r.l. (“Uniloc Luxembourg”) claims to be a  
19 Luxembourg company having a principal place of business at 15, Rue Edward Steichen, 4<sup>th</sup> Floor,  
20 L-2540, Luxembourg. Uniloc Luxembourg’s CEO Craig Etchegoyen maintains a residence in  
21 Newport Beach, California, where he spends about 20 percent of his time and which he uses to  
22 conduct Uniloc Luxembourg business. Uniloc Luxembourg’s chief financial officer, Drake  
23 Turner, resides and works in Southern California. Mr. Turner’s responsibilities include preparing  
24 Uniloc Luxembourg’s financial documents and negotiating terms with companies, including  
25 Fortress, that have security interests in Uniloc Luxembourg’s patents. Uniloc Luxembourg  
26 conducts business at Uniloc USA’s office in Newport, California.

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1           20. Defendant VLSI Technology LLC (“VLSI”) claims to be a Delaware limited  
2 liability company with a registered office at Corporation Trust Center, 1209 Orange Street,  
3 Wilmington, Delaware.

4           21. Defendant INVT SPE LLC (“INVT”) claims to be a corporation existing under the  
5 laws of the State of Delaware with its principal place of business within this District at One Market  
6 Plaza, Spear Tower, 42<sup>nd</sup> Floor, San Francisco, California.

7           22. Defendant Inventergy Global, Inc. (“Inventergy”) claims to be a Delaware  
8 corporation with its principal place of business within this District at 19925 Stevens Creek  
9 Boulevard, Cupertino, California.

10           23. Defendant DSS Technology Management, Inc. (“DSS”) claims to be a Delaware  
11 corporation with a principal place of business at 1650 Tyson’s Boulevard, Suite 1580, Tyson’s  
12 Corner, Virginia.

13           24. Defendant IXI IP, LLC (“IXI IP”) claims to be a New York limited liability  
14 company with its principal place of business located at 825 Third Avenue, 2nd Floor, New York,  
15 New York.

16           25. Defendant Seven Networks, LLC (“Seven Networks”) claims to be a Delaware  
17 limited liability company with its principal place of business at 2660 East End Boulevard South,  
18 Marshall, Texas.

**JURISDICTION AND VENUE**

19  
20           26. This Court has jurisdiction over the federal claims alleged under 28 U.S.C. §§ 1331  
21 and 1337(a). This Court has jurisdiction over the unfair competition claims arising under state law  
22 pursuant to 28 U.S.C. § 1367(a). The Court may grant declaratory relief in this action pursuant to  
23 at least 28 U.S.C. §§ 2201 and 2202 and 15 U.S.C. § 26.

24           27. Venue is proper in this District pursuant to, at least, 15 U.S.C. § 22 and/or 28 U.S.C.  
25 § 1391(b) and (c) because, during the relevant period, Defendants resided, transacted business,  
26 were found, or had agents in this District, and/or because a substantial portion of the affected  
27 interstate trade and commerce described herein has been carried out in this District. In particular,  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

Intel and Apple have addressed Defendants’ anticompetitive conduct described herein from their headquarters in this District, including addressing licensing demands and coordinating the defense of Defendants’ litigation, much of which has occurred in this District. Further, Eran Zur, a Managing Director in Fortress’s San Francisco office, runs Fortress’s Intellectual Property Group, which has directed and controlled the anticompetitive conduct described herein.

28. This Court has personal jurisdiction over each Defendant based on its national contacts with the United States as a whole pursuant to 15 U.S.C. § 22, as well as Defendants’ relevant contacts with this judicial district. Defendants have conducted and continue to conduct business in this District and/or have engaged in continuous and systematic activities in this District, including licensing activities, demands, negotiations, and litigation directly or through their agents. Defendants have minimum contacts with this forum such that the exercise of jurisdiction over them would not offend traditional notions of fair play and substantial justice.

**INTRADISTRICT ASSIGNMENT**

29. The appropriate intradistrict assignment is in the San Jose Division. Under Civil Local Rule 3-2(c), a civil action shall be assigned to the division “serving the county in which the action arises.” An action “arises in the county in which a substantial part or the events or omissions which give rise to the complaint occurred.” Civ. L.R. 3-2(c). Here, a substantial part of those events or omissions occurred in Santa Clara County, where Intel and Apple are headquartered and where a substantial portion of the events set forth in this Complaint have a locus. As described above, Intel and Apple have addressed Defendants’ litigation and licensing demands from their headquarters in Santa Clara County. Civil actions arising in Santa Clara County “shall be assigned to the San Jose Division.” *Id.* at 3-2(e).

**I. FORTRESS’S ANTICOMPETITIVE PATENT AGGREGATION SCHEME**

30. Fortress describes its investing approach as “making control-oriented investments in cash flow generating assets.”<sup>12</sup> When it comes to patent investments, Fortress has taken its

---

<sup>12</sup> Fortress, <https://www.fortress.com/businesses/private-equity> (last visited Nov. 15, 2019).

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 “control-oriented” approach to an extreme. Fortress’s model is to condition its investments in  
2 PAEs on terms so severe that the PAEs have no choice but to make aggressive and reckless patent  
3 assertions to attempt to generate the revenue required to meet their obligations to Fortress. When  
4 they fail to do so—as is often the case—Fortress steps in and assumes even more control and/or  
5 ownership of the patents, allowing it to ratchet up the aggressiveness of the assertions. In other  
6 instances, such as with VLSI, Fortress has skipped this intermediary step of finding a partner to  
7 do its bidding and acquired patents through a subsidiary outright from the start. The result is that  
8 Fortress has either acquired or controls a portfolio of well over a thousand U.S. patents for high-  
9 tech consumer and enterprise electronic devices and components or software therein and processes  
10 used to manufacture them to deploy against its targets.

11 31. Fortress has targeted suppliers of high-tech consumer and enterprise electronic  
12 devices or components or software for such devices because they provide attractive targets for  
13 repeated and meritless assertions. An article co-authored by Eran Zur, Managing Director of the  
14 Intellectual Property Finance Group at Fortress, observes that courts can grant “oversized awards”  
15 in the technology sector that “stem from the sheer complexity of interoperable components and  
16 systems sold as part of functional units, if not integrated devices.”<sup>13</sup> Further, the article notes that  
17 “because technology invention tends to be incremental, to the extent an individual patent owner  
18 can be awarded damages on the price of the *entire end product* as opposed to their specific patent  
19 claim, a litigation incentive arises.”<sup>14</sup> That litigation incentive is coupled with what the article  
20 notes are “the substantial legal costs to defend a patent infringement suit,” creating a situation in  
21 which “speculative behavior drives an ever-inflating price ceiling (given the possibility of  
22 oversized damages) [and] a price floor becomes set by the extreme expense of litigation defense,  
23 marked at just under nuisance value.”<sup>15</sup>

24  
25 <sup>13</sup> Eran Zur, *Why Investment-friendly Patents Spell Trouble for Trolls*, (Sept. 24, 2015),  
26 <https://knowledge.wharton.upenn.edu/article/why-investment-friendly-patents-spell-trouble-for-trolls/> (last visited Nov. 15, 2019)

27 <sup>14</sup> *Id.* (emphasis supplied).

28 <sup>15</sup> *Id.*

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

32. Further, aggregating a massive portfolio of electronics patents allows Fortress and its PAEs to amass a range of patents that are both substitutes for and complements to one another. When a company wants to build an electronic device, such as a smartphone, there are many ways to do so. Each alternative requires multiple technologies. However, the alternatives do not require the same combination of technologies. For example, Alternative 1 might require technologies A, B and C, while Alternative 2 might require technologies D, E and F. The technologies used for Alternative 1 (A, B and C) are complements: they are each needed to create the device using Alternative 1. Similarly, the technologies used for Alternative 2 (D, E, and F) are complements. The technologies comprising Alternative 1 are also a substitute for the technologies comprising Alternative 2, because the bundle of technologies used in Alternative 1 can be used as a substitute for the bundle of technologies used in Alternative 2.

33. There are many possible permutations of complement and substitute technologies for electronics patents. For instance, Alternative 3 might require technologies A, C, and D. In that scenario, the technologies bundled in Alternative 3 are a substitute for the technologies bundled in Alternatives 1 and 2 respectively; A, C, and D are complements in the production of Alternative 3; and technology D is a substitute for technology B. Technologies can thus be both substitutes and complements. If Alternative 4 used technologies A, B, and D, then B and D are complements for Alternative 4, but D and B are also substitutes that if switched would change Alternative 1 to Alternative 3. Holding a broad array of patents that can act as both substitutes and complements in different circumstances allows Fortress and its PAEs flexibility to stifle competition in a variety of ways and against a variety of electronic device suppliers.

34. Some of the technologies that can be used to make an electronic device might be patented. But even with the most diligent approach to assessing the patent landscape for a product, it can be challenging to determine whether the technologies included in the device are patented, including because the scope of patent claims may be uncertain prior to litigation, as well as the validity and enforceability of such claims.

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1           35.     When this array of patents is held by multiple owners, each patent owner would  
2 only assert a patent if the expected value of doing so was net positive. “Weak” patents that have  
3 questionable validity, infringement, enforceability, and/or are easily designed around, and  
4 therefore have little or no meaningful value, are either not asserted, or are asserted to demand a  
5 license at an amount that is commensurate with the value of the patent’s merits.

6           36.     Faced with a patent asserted against its device, the supplier can typically either take  
7 a license to the patent or refuse to license and litigate the infringement claim. Regardless of which  
8 course is taken, the feasibility of designing around the asserted patent will affect the outcome  
9 because the supplier will not pay the patent owner a royalty greater than the cost to design around  
10 the patent.

11           37.     When patents are aggregated as Fortress has done, the dynamics for determining  
12 whether to assert a patent change and the options available to the target of the assertion also  
13 change—both of which have harmful impacts on competition.

14           38.     First, the scope of Fortress’s aggregation and its focus on electronics patents  
15 ensures that it can effectively exercise hold-up power by eliminating substitutes. Fortress has  
16 inevitably acquired substitute patents that, before aggregation, competed with each other. When  
17 the patents were held by their original owners, there was competition and a prospective licensee  
18 could choose between competing options (or forego those options and design its product in a  
19 different way). But now, under the control of Fortress, the prospect of competition disappears and  
20 so does the feasibility of redesigning products. Fortress and its PAEs can thus threaten a target  
21 with the serial risk that the next best alternative design to an asserted patent is also subject to a  
22 patent claim by one of Fortress’s PAEs.

23           39.     Second, aggregation elevates the value of asserting weak patents by Fortress-  
24 backed PAEs, untethered to the value of the patents themselves. Before aggregation, there would  
25 be no incentive to assert such patents because there would be no expectation of a positive return  
26 from asserting a weak patent because the patent could be expected to be proven invalid, not  
27 infringed, or unenforceable in litigation, or would be easily designed around. But, after  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 aggregation, assertion of weak patents as part of a wave of assertions against a target generates  
2 economic value even if many of those assertions are defeated in litigation. By increasing the  
3 volume of assertions a target faces, Fortress and its PAEs cause targets to deploy licensing and  
4 litigation resources less efficiently and thereby increase the value of litigation to Fortress and its  
5 PAEs. In particular, Fortress and its PAEs increase the likelihood that a weak patent will slip  
6 through litigation and be found infringed, valid, and enforceable when it should not be. Further,  
7 this strategy creates incentives for targets to settle with Fortress-backed PAEs for amounts that  
8 exceed the value (if any) of their patents to put an end to this risk. In this manner, Fortress's patent  
9 aggregation enables the use of weak patents to force targets to pay undeserved and inflated  
10 royalties.

11 40. Patent aggregators often claim they are more efficient at enforcing patents than  
12 other licensors and that their greater efficiency results in higher payments to inventors and  
13 therefore in more innovation. But there is no efficiency associated with patent aggregation in the  
14 Fortress assertion model described above. To the contrary, patent licensing becomes less efficient  
15 with this type of abusive patent aggregation because the targets waste resources to defend against  
16 meritless assertions.

17 41. Aggregating patents in the way that Fortress has done harms competition. First, by  
18 aggregating patents covering technologies that are actual or potential alternatives for one another,  
19 Fortress injures competition in the same way as any merger or combination of competitors. Before  
20 aggregation, when multiple parties held such patents, those parties competed with one another to  
21 license the patents, and licensees benefited from that competition through more favorable licensing  
22 terms. Multiple holders of substitute patents were forced to compete with each other to offer better  
23 terms to secure licensees. Once the patents were aggregated and controlled by Fortress, however,  
24 that competition was eliminated.

25 42. Second, Fortress introduces a new cost to suppliers of electronic devices and the  
26 components and software for those devices that dampens incentives for product suppliers to invest  
27 in research and development to drive innovation, thereby further undermining competition and  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 harming end consumers. Exposing the targeted suppliers to another cost benefits their competitors  
2 by making the targeted suppliers' products more expensive and/or less innovative. Those  
3 competitors might have previously owned some of the patents aggregated by Fortress but were  
4 unable to impose such high costs on suppliers using technologies claimed by the patents when the  
5 patents were not aggregated into a massive portfolio. Fortress's aggregation thus undermines  
6 competition in the sales of electronic devices and components and software for those devices.

7 43. Third, the higher royalty payments that Fortress and its PAEs generate reward the  
8 creation of patents that are not actually inventive or are not actually used. Thus, the higher  
9 royalties that patent aggregation generates do not lead to welfare-enhancing additional innovation.

10 44. Fourth, Fortress's hold-up power is amplified by the uncertainty it creates through  
11 the size of the portfolio it controls and obfuscation regarding the scope of that portfolio. After  
12 aggregation, potential licensees lose the ability to decipher the extent to which Fortress controls  
13 patents that they may actually have wanted to license ex ante or that would be substitutes to  
14 asserted patents. By way of example, Fortress employees are listed as managing members or  
15 directors of companies that otherwise have no publicly known ties to Fortress. Mysterious patterns  
16 emerge such as entities with names connoting an unspecified relationship with Fortress, by a prefix  
17 "CF." District court judges have gone so far as having to compel Defendants to reveal the  
18 ownership history of the asserted patents and the degree to which Fortress held rights in, and  
19 control over, those patents. The effect is that the hold-up power of asserted patents is imbued on  
20 other patents Fortress controls. Thus, rather than fostering pro-competitive patent licensing,  
21 Fortress's aggregation scheme reduces potential licensees' ability to obtain licenses to any patents  
22 they might be interested in licensing while simultaneously elevating the value of weak patents.

23 45. Fortress's use of a web of separate PAEs to disperse and enforce the portfolio also  
24 ensures that there is no single entity that can offer a comprehensive license to the Fortress portfolio  
25 and thereby increases the number of transactions necessary for licensees to attempt to secure patent  
26 peace or the number of litigations that Defendants can bring. Defendants benefit from increasing  
27 the number of transactions because the more transactions, the more opportunities that they have to  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 extract anticompetitive royalties that are not reflective of the value of the patents being licensed.  
2 The same goes for litigation—the more cases that Defendants bring, the more opportunities they  
3 create for mistaken findings of infringement or coercive settlements.

4 46. Distributing the patents across a network of PAEs, rather than having Fortress  
5 directly own and assert them, is also intended to limit the exposure of Fortress and the broader  
6 portfolio to potential blowback from aggressive assertions. For example, to the extent that one of  
7 Fortress's PAEs is subject to an award of significant sanctions or attorneys' fees, Fortress could  
8 decide either to cut its losses or that it is worth continuing to fund the PAE to pursue further  
9 assertions.

10 47. Moreover, PAEs can benefit in litigation from having had no role in prosecuting  
11 patents that they obtained from operating companies. The result is that it can be difficult for a  
12 defendant to obtain evidence and to mount a complete defense to a PAE's assertion—thereby  
13 increasing the likelihood of a mistaken verdict of infringement or failure to find unenforceability.

14 48. There is nothing inherently illegal with owning many patents or obtaining those  
15 patents through acquisition. But Fortress's patent aggregation scheme is unlike the development  
16 of patent portfolios by operating companies that use patents to safeguard their ability to offer their  
17 own products and services free from infringement by others. And it is different, too, from a  
18 company acquiring patents for the purpose of licensing based on the intrinsic value of those  
19 patents. Both of those scenarios have the potential to increase output and lower prices by putting  
20 patents to efficient use. But Fortress's aggregation is intended for an anticompetitive purpose—  
21 to invest in patents at costs lower than the holdup value of the patents to ensnare as many potential  
22 licensees and to allow it and the other Defendants to assert as many possible claims of infringement  
23 to tax the commercial use of existing technology at rates beyond the actual value (if any) of the  
24 aggregated patents. And Fortress's aggregation scheme has had its intended anticompetitive  
25 effects, capturing hold-up values that exceed the values at which Fortress or the other Defendants  
26 acquired the patents, leading to reduced output.

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1           49. Nor are the transfers of patents at issue here typical sales that place patents in the  
2 hands of new owners that intend to practice them to develop their businesses or to license them  
3 based on their technical merit to generate revenue. Instead, Defendants' transfers are made with  
4 the purpose and effect of stifling competition by allowing Fortress and those using Fortress-backed  
5 patents to extort supracompetitive royalties unrelated to the value (if any) of the Fortress-backed  
6 patents.

7           50. Transferring patents from operating companies to Fortress and its PAEs reduces or  
8 eliminates competitive constraints that would otherwise have restricted the ability of the former  
9 owners to impose onerous licensing terms when they asserted the patents. Product companies  
10 generally sell a range of products in competition with other companies, and their ability to sell any  
11 of them is constrained by the competition faced by all the products. A product company knows  
12 that if it acts too aggressively or rapaciously toward the customers of some of its products, those  
13 customers and others will be more likely to buy other types of products offered by the company  
14 from other companies that have not been so aggressive. In that way, competition in the sale of one  
15 product constrains the prices of other products, and the product companies selling such products  
16 will have a strong competitive incentive to maintain a positive industry reputation and good  
17 customer relationships over the full range of their products. For example, infringement actions by  
18 component or software suppliers against customers or potential customers will limit prospects for  
19 future sales. Suits by electronic device suppliers against suppliers or potential suppliers of  
20 components or software could jeopardize their ability to source essential components or software  
21 for their devices. Reputational and relational harm from filing repeated, baseless infringement  
22 suits will limit product companies' ability to participate effectively in collaborative industry  
23 initiatives, such as standard setting or other industry endeavors. Because transfers of patents from  
24 product companies to Fortress and its PAEs lessen or eliminate these and other constraints and  
25 place the patents with a party with different incentives, those transfers result in inflated royalties  
26 or other less favorable licensing terms. Transfers to Fortress and its PAEs—companies that  
27 produce no products and thus face no risk of patent countersuits from their targets—place patents  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 in the hands of entities that face no such competitive constraints and that are thus free to maximize  
2 their profits through aggressive litigation campaigns. Moreover, Fortress’s use of obfuscation and  
3 a web of PAEs heighten the anticompetitive effects of such transfers. That Fortress and its PAEs  
4 have repeatedly entered patent transfer agreements with no efficiency rationale and those  
5 agreements have resulted in inflated royalties is direct proof of the anticompetitive effects of those  
6 transfers.

7 **A. Fortress and the Uniloc Defendants**

8 51. On December 30, 2014, Fortress Credit entered into a Revenue Sharing and Note  
9 and Warrant Purchase Agreement (“Uniloc-Fortress Revenue Sharing Agreement”) with Uniloc  
10 Luxembourg and Uniloc USA. Under the Uniloc-Fortress Revenue Sharing Agreement, Fortress  
11 provided a loan to Uniloc USA in exchange for a share of future licensing revenue from its patent  
12 portfolio. If Uniloc USA failed to timely make a required payment to Fortress or any other “Event  
13 of Default” occurred, Fortress had the right to accelerate the full payments owed by Uniloc USA.

14 52. Fortress also entered into a Patent License Agreement with Uniloc Luxembourg  
15 and Uniloc USA on December 30, 2014. The License granted Fortress “a non-exclusive,  
16 transferrable, sub-licensable, divisible, irrevocable, fully paid-up, royalty-free, and worldwide  
17 license to the Licensed Patents, including, but not limited to, the rights to make, have made, market,  
18 use, sell, offer for sale, import, export and distribute the inventions disclosed in the Licensed  
19 Patents and otherwise exploit the Licensed Patents in any lawful manner in *Licensee’s sole and*  
20 *absolute discretion* solely for the benefit of the Secured Parties (‘Patent License’), provided that  
21 Licensee shall only use the Patent License following an Event of Default.”<sup>16</sup>

22 53. Fortress later took steps to control even more directly the assertion of the Uniloc  
23 Luxembourg and Uniloc USA patents. On February 23, 2018, Fortress formed Uniloc 2017 in  
24 order for Fortress to direct and control the assertion of Uniloc patents. James K. Noble, who was  
25 previously Fortress’s Secretary, signed the certificate of formation for Uniloc 2017.

26  
27 <sup>16</sup> *Uniloc USA, Inc. et al. v. Apple Inc.*, No. 3:18-CV-00360 (N.D. Cal.) (WHA), Dkt. 167-4  
28 (emphasis added).

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

54. On May 3, 2018, Uniloc Luxembourg assigned nearly 600 patents to Uniloc 2017 pursuant to a March 28, 2018 Asset Purchase Agreement. Constantine Dakolias signed the agreement as President of Uniloc 2017. Mr. Dakolias is also Co-Chief Investment Officer, Credit Funds at Fortress.

55. As one court observed about the various transfers of patents and agreements between the Uniloc entities: “The Court suspects that Uniloc’s manipulations in allocating rights to the patents-in-suit to various Uniloc (possibly) shell entities is perhaps designed to insulate Uniloc Luxembourg from any award of sanctions in the event Uniloc loses this litigation (or some substantial part thereof).”<sup>17</sup>

56. The patents that Uniloc Luxembourg assigned to Uniloc 2017 included patents claimed to be standard-essential patents (“SEPs”) for cellular standards that originated with Koninklijke Philips Electronics N.V. (“Philips”). Philips had provided a commitment to the European Telecommunications Standards Institute (“ETSI”) to license any of its essential patents on fair, reasonable, and non-discriminatory (“FRAND”) terms and conditions. The patents were subsequently transferred to the PAE Pendragon Wireless in 2012 and then to Uniloc Luxembourg in 2018 before ultimately being transferred to Uniloc 2017 in 2018.

**B. Fortress and VLSI**

57. Fortress strategized for six months before undertaking the creation of VLSI and causing the transfer of patents to VLSI.<sup>18</sup> Among the options Fortress considered was a “Privateering Option” in which the patents would be transferred to a new entity from their prior owner to carry out enforcement. Another option was the “Corporate Carve Out” in which Fortress would purchase a division of the former owner along with some of its patents. Ultimately, Fortress settled on the Privateering Option, to be accomplished through the creation of VLSI to obtain

---

<sup>17</sup> *Uniloc 2017 LLC v. Google LLC*, No. 2:18-cv-00553 (E.D. Tex. Jul. 1, 2019), Dkt. 28 Exhibit V.

<sup>18</sup> *VSLI Technology LLC v. Intel Corporation et al*, No. 5:18-mc-80193 (N.D. Cal. Jan. 1, 2019) (NC), Dkt 31.

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 patents from the former owner and then assert them in litigation. The terms of the arrangement  
2 were spelled out in a Patent Purchase and Cooperation Agreement.

3 58. Fortress formed VLSI on June 27, 2016. VLSI's formation document is signed by  
4 Marc K. Furstein, Fortress's Managing Director, President of the Credit Funds & Chief Operating  
5 Officer of Credit Funds. Two days after VLSI's formation, Justin Klein (then Chief Financial  
6 Officer of Fortress's credit arm) formed CF VLSI Holdings LLC ("VLSI Holdings"). VLSI is a  
7 subsidiary of VLSI Holdings. That VLSI ultimately operates at the behest of Fortress is further  
8 evidenced by the signature of Eran Zur, Managing Director of Fortress's Intellectual Property  
9 Group and an "authorized signatory" for VLSI, on several documents assigning patents to VLSI.

10 59. VLSI holds nearly 200 patents and began receiving them with an August 16, 2016  
11 assignment. Mr. Zur signed a certain number of the patent assignment agreements on behalf of  
12 VLSI.

13 60. Neither VLSI nor VLSI Holdings manufactures or sells any products. VLSI  
14 appears to have a single employee—its Chief Executive Officer, Michael Stolarski. Mr. Stolarski  
15 is an attorney who worked at several law firms before becoming the CEO of VLSI.

16 **C. Fortress and INVT**

17 61. In May 2013, Inventergy acquired over 180 patents from Huawei Technologies Co.  
18 ("Huawei") claimed to relate to IP Multimedia Subsystem (IMS) and Voice over IP (VoIP).  
19 Inventergy acquired the Huawei patents subject to certain ongoing payment obligations to Huawei,  
20 including to make a one-time payment when a certain revenue threshold was obtained by licensing  
21 the patents and also to share a certain percentage of the quarterly net revenue earned by licensing  
22 the patents.

23 62. In October 2013, Inventergy acquired nearly 500 patents from Panasonic  
24 Corporation ("Panasonic") claimed to relate to 3G and 4G mobile telecommunications. Inventergy  
25 acquired the Panasonic patents subject to an obligation to share a certain percentage of the  
26 quarterly net revenue earned on the patents with Panasonic, including to make certain guaranteed  
27 payments. Inventergy agreed that if it failed to make the guaranteed payments by a specified date,  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 Panasonic could charge it late fees and Panasonic may have the right to collect interest and in  
2 certain circumstances to terminate the agreement under which the patents were transferred to  
3 Inventergy. As described further below, a number of the Panasonic patents are claimed to be  
4 essential to cellular standards and subject to commitments to license them on FRAND terms and  
5 conditions.

6 63. In May 2014, Inventergy acquired approximately 80 patents claimed to be related  
7 to IMS and VoIP from Nokia Corporation (“Nokia”). As consideration, Inventergy agreed to make  
8 cash payments to Nokia on or before October 1, 2014, June 1, 2015, and June 1, 2016.

9 64. On October 1, 2014, affiliates of Fortress, DBD Credit Funding, LLC and CF DB  
10 EZ LLC, entered a Revenue Sharing and Note Purchase Agreement with Inventergy. Through the  
11 arrangement, Fortress provided \$11 million in financing to Inventergy, consisting of \$10 million  
12 in debt financing and \$1 million in sale of stock. As Inventergy informed its shareholders, the  
13 Fortress funds were “applied towards the repayment of existing debt obligations and improvement  
14 of our capital structure.”

15 65. In exchange for Fortress’s investment, Inventergy agreed to apply revenues  
16 generated from patent monetization to repayment of the investment and, further, to provide  
17 Fortress with an additional portion of Inventergy’s licensing revenues. If Inventergy failed to  
18 make the required payments, it could default under the agreement. As Inventergy subsequently  
19 warned its shareholders: “In the case of a default, Fortress could accelerate our obligations under  
20 the Fortress Agreement and exercise their right to foreclose on their security interests, which could  
21 force us to cease operations.”

22 66. Fortress’s backing emboldened Inventergy to aggressively pursue licensing targets.  
23 As Sonus Networks alleged in a case against Inventergy, Inventergy’s CEO Joe Byers told Sonus  
24 in January 2015 that “Fortress[,] does not settle” in litigation and that if Sonus Networks declined  
25 to take a license, it would face “an IP bloodbath.”

26 67. On December 22, 2016, Inventergy entered a Restructuring Agreement to amend  
27 the Revenue Sharing and Note Purchase Agreement. As Inventergy explained the consequences  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 of the Restructuring Agreement, “Fortress will have the sole discretion to make any and all  
2 decisions relating to [Inventergy’s] patents and patent monetization activities (excluding future  
3 acquired patents related to Inventergy Innovations, LLC, a subsidiary of Parent, and related  
4 monetization activities) (such patents that are subject to the Restructuring Agreement, the  
5 ‘Patents’), including the right to license, sell or sue unauthorized users of the Patents.”

6 68. Further, the Restructuring Agreement modified the revenue sharing arrangement to  
7 provide that after making certain required payments, including to Nokia, Huawei, and Panasonic,  
8 Fortress would receive proceeds “until Fortress has received (x) reimbursement of any amounts  
9 advanced by Fortress pursuant to the Restructuring Agreement plus 20% annual interest on such  
10 advances plus (y) \$30.5 million less any amounts paid to Fortress for the Note Obligations under  
11 the Revenue Sharing and Note Purchase Agreement after December 22, 2016” and “after all of the  
12 foregoing payment obligations are satisfied, 70% to Fortress and 30% to the Company.”  
13 Inventergy announced the Restructuring Agreement as an arrangement “under which Fortress may  
14 fund, at its discretion, an enhanced enforcement program to further monetize Inventergy’s 740  
15 telecommunications patent assets that the Company previously acquired from Panasonic, Nokia  
16 and Huawei.”

17 69. As a result of the Restructuring Agreement, Inventergy and a Fortress affiliate, CF  
18 INVT Holdings LLC, on April 27, 2017 formed INVT. Mr. Dakolias, Co-Chief Investment  
19 Officer, Credit Funds at Fortress, is the President of CF INVT Holdings LLC, and signed INVT’s  
20 Limited Liability Company agreement on behalf of INVT and CF INVT Holdings LLC. Michele  
21 Moreland, a Director at Fortress, serves as the Licensing Officer of INVT SPE LLC.

22 **D. Fortress and DSS**

23 70. On February 13, 2014, Fortress Credit entered into an Investment Agreement with  
24 DSS and other undisclosed investors (“DSS-Fortress Investment Agreement”). Under the DSS-  
25 Fortress Investment Agreement, Fortress and the investors granted a loan to DSS in exchange for  
26 it placing a lien in favor of the investors on ten semiconductor patents and assigned to the investors  
27  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 certain funds recoverable from successful patent litigation involving these patents, including  
2 settlement payments, license fees and royalties on the patents.

3 71. On December 2, 2016, following DSS's default on its payment obligations under  
4 the DSS-Fortress Investment Agreement, the parties amended that agreement—including to  
5 extend the period for DSS to meet its payment obligations, to add the requirement that DSS repay  
6 certain expenses, and to require that DSS share proceeds from monetization efforts associated with  
7 certain additional patents. DSS also granted Fortress and the investors a security interest in certain  
8 of DSS's unencumbered semiconductor patents to further collateralize the amounts owed under  
9 the DSS-Fortress Investment Agreement. In February 2018, DSS failed to meet its payment  
10 obligations under the amended agreement.

11 72. On June 26, 2018, DSS entered into an agreement with Fortress Credit, pursuant to  
12 which DSS transferred to Fortress Credit all the remaining economic rights to certain of DSS's  
13 semiconductor related patents.

14 **E. Fortress and IXI IP**

15 73. On April 2, 2014, IXI IP was formed in New York. IXI IP is a patent assertion  
16 entity that received patents from IXI Mobile (R&D) Ltd. ("IXI R&D") on June 5, 2014, less than  
17 two weeks before filing its first suit against Apple. The same day IXI IP received the transfer, it  
18 licensed the patents back to IXI R&D.

19 74. On June 5, 2014, IXI IP assigned a security interest in each of the patents it received  
20 from IXI R&D to Fortress Credit. Three months later, on September 11, 2014, Fortress Credit Co.  
21 DBD LLC assigned its interest to FCO V CLO Transferor LLC, another Fortress subsidiary.

22 **F. Fortress and Seven Networks**

23 75. Seven Networks was originally incorporated in Delaware in 2000 as a mobile  
24 messaging company under the name Seven Networks Inc. Seven Networks Inc. subsequently  
25 registered to conduct business in Texas in 2005.

26 76. Fortress was formerly an investor in Seven Networks Inc. Fortress gained control  
27 of Seven Networks in 2015, after Seven Networks unsuccessfully attempted to monetize its patent  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 portfolio by offering its patents as well as its entire company for evaluation and sale to a number  
2 of entities, including Apple. In July 2015, Fortress converted Seven Networks Inc. to a limited  
3 liability company. Seven Network Inc.'s patents passed to Seven Networks at the time of the July  
4 2015 corporate conversion.

5 77. Seven Network's parent is CF SVN LLC, a Delaware company formed on July 2,  
6 2015, and a Fortress subsidiary.

7 **G. Fortress and KIP CR P1**

8 78. Crossroads Systems, Inc. ("Crossroads") is a publicly-traded company that used to  
9 be in the business of licensing intellectual property.

10 79. In July 2013, Crossroads received a loan of up to \$10 million from Fortress Credit  
11 that was later assigned to another Fortress affiliate, CF DB EZ LLC. As part of the loan agreement,  
12 Crossroads assigned 109 granted or pending patents to a partnership, KIP CR P1 LP ("KIP CR  
13 P1"), formed by Crossroads and Fortress. The transferred patents were all of Crossroads' patents  
14 with the exception of one patent family (for U.S. Patent No. 5,941,972 ("972 patent")). As with  
15 Fortress's other loan deals, Crossroads risked losing its interests in the transferred patents in an  
16 "Event of Default," including missing a payment to Fortress.

17 80. Crossroads was ultimately able to repay the loan to Fortress in October 2015 only  
18 when it made a deal to share revenue from the monetization of the '972 patent family with another  
19 company. But this arrangement was not enough for Crossroads to stay solvent. In August 2017,  
20 Crossroads announced that it had filed for Chapter 11 bankruptcy in order to restructure its  
21 business and attract new investment.

22 81. In the end, Fortress wound up acquiring all of Crossroads' patents. As part of its  
23 restructuring, Crossroads announced in November 2017 that it had sold its patent portfolio as well  
24 as related partnership interests to an "affiliate of Fortress Investment Group" to take over patent  
25 monetization efforts.<sup>19</sup> That Fortress affiliate was KIP CR P1. Fortress and Crossroads agreed to

26  
27 <sup>19</sup> Crossroads Systems press release, *Crossroads Systems Sells Patent Portfolio to Affiliate of*  
28 *Fortress Investment Group*, Nov. 7, 2017.

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 “share the proceeds from such efforts equally (after deducting expenses and a \$1.5 Million  
2 monetization hurdle).”<sup>20</sup>

## 3 **II. LICENSING AND LITIGATION CAMPAIGNS**

4 82. Consistent with Fortress’s intent, the PAEs it has created or in which it has invested  
5 have engaged in prolific patent assertions and litigation campaigns. The practice of serial  
6 litigations that Fortress’s PAEs have pursued demonstrate that they have used litigation to impose  
7 a crushing burden on their targets rather than with regard to the merits of their patents or to  
8 vindicate their patent rights.

### 9 **A. The Uniloc Defendants**

10 83. To date, the Uniloc Defendants have targeted Apple in 25 patent cases in the United  
11 States:

- 12 • *Uniloc USA, Inc. et al v. Apple Inc.*, No. 2:16-cv-00638 (E.D. Tex.)
- 13 • *Uniloc USA, Inc. et al. v. Apple Inc.*, No. 2:17-cv-00258 (E.D. Tex.),  
14 subsequently transferred as 3:18-cv-00357 (N.D. Cal.) (LHK)
- 15 • *Uniloc USA, Inc. et al. v. Apple Inc.*, No. 2:17-cv-00454 (E.D. Tex.),  
16 subsequently transferred as 3:18-cv-00358 (N.D. Cal.) (WHA) and 18-2094  
17 (Fed. Cir.)
- 18 • *Uniloc USA, Inc. et al. v. Apple Inc.*, No. 2:17-cv-00455 (E.D. Tex.),  
19 subsequently transferred as 3:18-cv-00359 (N.D. Cal.) (WHA)
- 20 • *Uniloc USA, Inc. et al. v. Apple Inc.*, No. 2:17-cv-00457 (E.D. Tex.),  
21 subsequently transferred as 3:18-cv-00360 (N.D. Cal.) (WHA)
- 22 • *Uniloc USA, Inc. et al v. Apple Inc.*, No. 2:17-cv-00469 (E.D. Tex.),  
23 subsequently transferred as 4:18-cv-00361 (N.D. Cal.) (PJH)
- 24 • *Uniloc USA, Inc. et al v. Apple Inc.*, No. 2:17-cv-00470 (E.D. Tex.),  
25 subsequently transferred as 4:18-cv-00362 (N.D. Cal.) (PJH)
- 26 • *Uniloc USA, Inc. et al v. Apple Inc.*, No. 2:17-cv-00522 (E.D. Tex.),  
27 subsequently transferred as 4:18-cv-00364 (N.D. Cal.) (PJH)
- 28 • *Uniloc USA, Inc. et al v. Apple Inc.*, No. 2:17-cv-00534 (E.D. Tex.),  
subsequently transferred as 3:18-cv-00363 (N.D. Cal.) (WHA)

---

<sup>20</sup> *Id.*

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

- *Uniloc USA, Inc. et al v. Apple Inc.*, No. 2:17-cv-00535 (E.D. Tex.), subsequently transferred as 3:18-cv-00572 (N.D. Cal.) (WHA)

- *Uniloc 2017 LLC et al v. Apple Inc.*, No. 1:18-cv-00907 (W.D. Tex.), subsequently refiled as 1-18-cv-00991 (W.D. Tex.), and subsequently transferred as 5:19-cv-01929 (N.D. Cal.) (EJD)
- *Uniloc 2017 LLC v. Apple Inc.*, No. 6:19-cv-00532 (W.D. Tex.)

84. The Uniloc Defendants have often filed these cases against Apple in waves, with the apparent aim of heightening the threat to Apple to increase leverage and extract a settlement.

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

For example, in June 2016, Uniloc USA and Uniloc Luxembourg sued Apple on four patents; between April and October 2017, Uniloc USA and Uniloc Luxembourg sued Apple on another 16 patents; in February 2018, Uniloc USA and Uniloc Luxembourg sued Apple on another seven patents; in April 2018, Uniloc USA and Uniloc Luxembourg sued Apple on another two patents; and in October 2018, Uniloc 2017 and Uniloc Licensing USA LLC (“Uniloc Licensing USA”) sued Apple on another four patents.

85. Although Apple has been a favored target of the Uniloc Defendants, it has not been the only one. Since its creation in February 2017, Uniloc 2017 has been a plaintiff in more than 130 patent infringement suits. Its targets have included the following companies that supply high-tech consumer and enterprise electronic devices or components or software for such devices:

- Barnes & Noble, Inc.
- BlackBerry Corporation
- Cardo Systems, Inc.
- Cisco Systems, Inc.
- Google LLC (“Google”)
- Hike Ltd.
- Huawei Devices USA
- LG Electronics USA, Inc.
- Samsung Electronics America, Inc.
- Terrano, LLC
- ZTE (USA), Inc.
- Netflix, Inc.
- Hulu

86. By targeting a broad number of suppliers of a particular electronics product—e.g., smartphones—the Uniloc Defendants (as well as the other Defendants) increase the chances that the costs imposed on those suppliers will be internalized and passed along to consumers.

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

87. As with Apple, the Uniloc Defendants have targeted many of these companies in repeated lawsuits. Google, for example, has been a frequent target. On October 1, 2018, Uniloc 2017 and Uniloc Licensing USA filed four separate complaints against Google. Between October 31, 2018 and November 1, 2018, Uniloc 2017, Uniloc Licensing, and Uniloc USA filed another 10 separate complaints against Google. Later in November, the Uniloc entities dismissed those 14 complaints without prejudice and a different set of Uniloc entities—Uniloc 2017 and Uniloc USA—filed 14 new complaints against Google on the same 14 patents asserted in the prior complaints. In December 2018, Uniloc 2017 filed an additional seven complaints against Google, one of which it later dismissed. That amounts to a total of 35 lawsuits against Google by Uniloc entities over three months.

88. The three years so far of the Uniloc Defendants suing Apple has demonstrated Fortress’s scheme to assert endless, meritless litigation. The four patents in the first Uniloc case against Apple have all been found unpatentable by the USPTO. The second Uniloc case against Apple revealed how little pre-suit diligence is taken before suing, when after suing, Uniloc Luxembourg voluntarily dismissed one of the three asserted patents and admitted that the “Patent is probably commercially worthless.”<sup>21</sup> It is no surprise that one judge described Uniloc USA’s infringement theories in a case as “bogus and conclusory.”<sup>22</sup> The examples below demonstrate the flaws in the Uniloc Defendants’ patents, including patents that have been found invalid in multiple ways by multiple adjudicators.

89. In one example of a Uniloc Defendant asserting invalid patents, Uniloc USA sued eight companies, including Apple, on a patent that two courts have found invalid and on which the PTAB has initiated an *inter partes* review. Uniloc USA asserted U.S. Patent No. 6,993,049 (the “’049 patent”), titled “Communication System,” in the following cases:

- *Uniloc USA, Inc. v. Microsoft Corp.*, No. 8:18-cv-01279 (C.D. Cal.)

90. The '049 patent purports to cover an improvement of Bluetooth technology. On April 19, 2019, a court in the Northern District of California held the '049 patent invalid as failing to recite patent-eligible subject matter under 35 U.S.C. § 101. Specifically, the court concluded that the '049 patent is “directed to the abstract idea of additional polling in a wireless communication system” and that “there is no inventive concept sufficient to save the claim.”<sup>23</sup>

91. On April 5, 2019, a court in the Eastern District of Texas held that there were multiple bases to conclude that asserted claims 1 and 8 of the '049 patent are indefinite.<sup>24</sup> On July 2, 2019, Uniloc USA, Uniloc Luxembourg, and Uniloc 2017 jointly filed with defendants Huawei Device USA, Inc. and Huawei Device Co. Ltd a Joint Motion to Dismiss with Prejudice, in which dismissal of the Uniloc Defendants' claims was sought to be “conditioned on the Court's vacating the Claim Construction Memorandum Opinion and Order . . . entered April 5, 2019.”<sup>25</sup> By seeking to dismiss without prejudice, the Uniloc Defendants attempted to avoid having final judgment entered finding the '049 patent invalid, allowing the Uniloc Defendants to continue to pursue

<sup>23</sup> Amended Order Granting Motion to Dismiss at 17, 32, *Uniloc USA Inc. v. LG Elecs. USA Inc.*, No. 5:18-cv-06738 (N.D. Cal. Apr. 9, 2019) (LHK), Dkt 109.

<sup>24</sup> Claim Construction Memorandum and Order, *Uniloc USA, Inc. v. Samsung Elecs. America, Inc.*, Nos. 2:18-cv-00040, 2:18-cv-00074 (E.D. Tex. Apr. 5, 2019).

<sup>25</sup> Joint Motion to Dismiss, *Uniloc USA, Inc. et al v. Huawei Device USA, Inc. et al*, No. 2:18-cv-00074 (E.D. Tex. Jul. 2, 2019), Dkt 58.

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

baseless claims using that patent. The court denied the Uniloc Defendants' ploy, ordering on July 9, 2019 that the parties were to file a "new motion to dismiss that is not conditioned upon the Court vacating the Claim Construction Memorandum Opinion and Order."<sup>26</sup>

92. Finally, on July 22, 2019, the PTAB instituted an *inter partes* review of the '049 patent, concluding that Apple's "Petition establishes a reasonable likelihood that [Apple] would prevail in showing claims 11 and 12 [of the '049 patent] are unpatentable" as obvious in light of multiple prior art references.<sup>27</sup>

93. The Uniloc Defendants have also asserted claims without regard to the merits of their infringement allegations. For example, in *Uniloc USA, Inc. v. Apple Inc.*, No. 2:17-cv-00470 (E.D. Tex.), subsequently transferred as 4:18-cv-00362 (N.D. Cal.) (PJH), Uniloc USA and Uniloc Luxembourg asserted that Apple's iPhones, iPads, and Watches infringe U.S. Patent No. 7,690,556 (the "'556 patent"). The '556 patent claims a "step counter system," which comprises "an accelerometer to detect motion of a user, a step calculation logic to utilize the motion detected by the accelerometer to detect and count steps, and an incline logic to calculate an incline of a surface on which the user moved." The complaint accused Apple's products "that incorporate hardware (such as an accelerometer, inclinometer, altimeter and/or barometer) and software (such as the Health app in iOS 8.0.x, iOS 9.0.x, iOS 10.0.x and watchOS versions) that are capable of calculating the number of steps taken (e.g., 'Steps') and distance covered (e.g., 'Walking + Running Distance') by a user as well as the user's change in elevation (e.g., 'Flights Climbed')." But Apple's products do not use an accelerometer to determine elevation change or incline. Indeed, an analysis of the '556 patent commissioned by its former owner, Fullpower Technologies, Inc. (Fullpower), observed that accelerometers in current fitness trackers, including those in Apple products, "do not monitor how much the foot is going up and how much is coming down," as required by the claims. Instead, as the Fullpower analysis noted, the incline measurements in the

<sup>26</sup> Order Denying Motion to Dismiss, *Uniloc USA, Inc. et al v. Huawei Device USA, Inc. et al*, No. 2:18-cv-00074 (E.D. Tex. Jul. 9. 2019), Dkt 59.

<sup>27</sup> *Apple Inc. v. Uniloc 2017 LLC*, Case No. IPR2019-00251 (PTAB July 22, 2019).

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

tracking devices “com[e] from the barometer/altimeter instead of the accelerometer.”<sup>28</sup> Apple obtained this analysis through third-party discovery from Fullpower. Uniloc USA and Uniloc Luxembourg refused to reveal to Apple whether it knew of the analysis performed for Fullpower before filing suit. Uniloc USA and Uniloc Luxembourg either ignored this information or was willfully blind to it before bringing a meritless case against Apple.

94. Beyond the '556 patent being not infringed, nearly every claim was found invalid as indefinite in Uniloc USA, Uniloc Luxembourg's case against Samsung Electronics Co., Ltd. and Samsung Electronics America, Inc. (“Samsung”).<sup>29</sup> The Uniloc Defendants litigated the case against Samsung all the way until the days leading up trial, when it voluntarily dismissed the case.

95. Notwithstanding the weakness of its claim on the '556 patent, Uniloc USA and Uniloc Luxembourg have disclosed that they believes they are entitled to damages of between \$1.41 and \$2.75 per Apple product, for total damages in the range of \$375 to \$732 million. The apparent precision of the per-unit damages request is a facade; Uniloc USA and Uniloc Luxembourg simply adopted the amounts that Apple sought from Samsung in litigation for Apple's patents. Uniloc USA and Uniloc Luxembourg have adopted this approach to damages in multiple cases against Apple in complete disregard for the technology claimed in the asserted patents. Based on this approach, Uniloc USA and Uniloc Luxembourg have suggested that they are entitled to between \$2.6 and \$5.1 billion in damages from just four of its 25 cases against Apple:

Case	Patent	Per Unit Damages	Damages
<i>Uniloc USA, Inc. v. Apple Inc.</i> , No. 5:18-cv-00357 (N.D. Cal.) (LHK)	8,239,852: “Remote update of computers based on physical device recognition”	\$1.41 - \$2.75	\$756,709,869 - \$1,475,852,582

<sup>28</sup> *Uniloc USA, Inc. v. Apple Inc.*, 4:18-cv-00362 (N.D. Cal.) (PJH), Dkt. 120-2.

<sup>29</sup> Claim Construction Memorandum & Order, *Uniloc USA, Inc. v. Samsung Elecs. America, Inc.*, No. 2:17-cv-651 (E.D. Tex. Oct. 24, 2018), Dkt. 77. The complaint was originally filed by Uniloc USA and Uniloc Luxembourg and Uniloc 2017 later joined.

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

Case	Patent	Per Unit Damages	Damages
	9,414,199: "Predictive delivery of information based on device history"	\$1.41 - \$2.75	\$186,200,370 - \$363,156,750
<i>Uniloc USA, Inc. v. Apple Inc.</i> , No. 4:18-cv-00361 (N.D. Cal.) (PJH)	8,872,646: "Method and system for waking up a device due to motion"	\$1.41 - \$2.75	\$166,933,405 - \$325,579,336

<i>Uniloc USA, Inc. v. Apple Inc.</i> , No. 4:18-cv-00364 (N.D. Cal.) (PJH)	7,653,508: "Human activity monitoring device"	\$1.41 - \$2.75	\$375,273,911 - \$731,917,202
	7,881,902: "Human activity monitoring device"	\$1.41 - \$2.75	\$375,273,911 - \$731,917,202
	8,712,723: "Human activity monitoring device"	\$1.41 - \$2.75	\$375,273,911 - \$731,917,202
<b>Total</b>	<b>\$2,610,939,288 - \$5,092,257,476</b>		

96. As the number of times that the Uniloc Defendants' cases against Apple have been transferred out of Texas—shown in the list above in paragraph 82—makes clear, the Uniloc Defendants have time and again sought to impose the additional burden on Apple of litigating in an inconvenient forum. Uniloc Defendants have gone so far as to misrepresent facts about its connections to Texas and lack of connections to California in an effort to fend off Apple's requests to have cases transferred to this District. In *Uniloc USA, Inc. v. Apple Inc.*, No. 2:17-cv-00258 (E.D. Tex.), the court detailed a series of deceptive statements made by Uniloc USA and Uniloc Luxembourg, concluding that such "contradictory representations [are] troubling, particularly

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 because they are not isolated exceptions.” For example, Uniloc USA and Luxembourg made  
 2 repeated misrepresentations about their lack of connection to California<sup>30</sup>:

3 Mr. Burdick, Uniloc’s only party witness residing within the Eastern  
 4 District of Texas, does not spend the majority of his time in the  
 5 Plano office. (Dkt. No. 60-2, Ex. B at 2.) Mr. Burdick spends  
 6 equally as much time in Plano, as he does in Boise, Idaho and in  
 7 southern California. (*Id.*) In addition, Mr. Etchegoyen [the CEO of  
 8 Uniloc Luxembourg] spends about twenty percent of his time in  
 9 either Newport Beach or Irvine, California and owns a residence in  
 10 Newport Beach, which he uses when he “is doing business in  
 11 Orange County.” (*Id.*; Dkt. No. 60-1, Ex. A at 160:15–16.) Both  
 12 Mr. Burdick and Mr. Etchegoyen have held around one hundred  
 13 “top-level strategy meetings” in southern California, for Uniloc  
 14 business purposes. (Dkt. No. 60-1, Ex. A at 54:2–55:11.) Mr.  
 15 Etchegoyen separately travels to southern California every month to  
 meet with Mr. Turner, Uniloc Luxembourg S.A.’s CFO. (Dkt. No.  
 60-1, Ex. A at 47:18–25.) All of these facts fly in the face of  
 Uniloc’s prior representations: that Uniloc had only one full-time  
 employee, Tanya Kiatkulpiboone, working at its office in Irvine,  
 California as of April 2017 (Dkt. No. 30-7, Burdick Decl. ¶ 10); that  
 Mr. Etchegoyen has lived in Hawaii since well before the filing date  
 of the Complaint and does not maintain a residence in California  
 (Dkt. No. 30 at 12); and that Mr. Burdick does not work in California  
 (Dkt. No. 43 at 2 n.3 [(“Apple also repeats its erroneous assertion  
 that Uniloc’s IP counsel lives and works in California.”); and that  
 Apple “attempts to exaggerate Uniloc’s ties to California” (Dkt. No.  
 30 at 1–2).

16 97. As non-practicing entities, the Uniloc Defendants cannot credibly seek injunctions  
 17 in U.S. litigation under the Supreme Court’s decision in *eBay Inc. v. MercExchange, LLC*, 547  
 18 U.S. 388 (2006), but they do not face the same limitations in Europe where injunctions may be  
 19 automatically granted if infringement is found. Accordingly, Uniloc Luxembourg has sought to  
 20 enjoin Apple in litigation in Germany as leverage to coerce Apple to accept unreasonable licensing  
 21 terms—including for its U.S. patents—or face the risk of having its business shut down. In Uniloc  
 22 Luxembourg’s first case to proceed to trial against Apple, in Germany, it was Fortress employees  
 23 who attended and consulted during the trial with outside counsel for Uniloc Luxembourg. As with  
 24 the rest of its cases against Apple to date, the court found the allegation meritless, here based on

26 <sup>30</sup> Memorandum Order and Opinion at 16-17, *Uniloc USA, Inc. v. Apple Inc.*, No. 2:17-cv-00258  
 27 (E.D. Tex. Dec. 22, 2017).

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

Apple not infringing the patent, and dismissed the case (a decision that Uniloc Luxembourg has appealed).

**B. VLSI**

98. On October 2, 2017, VLSI filed a suit against Intel in the Northern District of California, asserting eight patents against virtually every one of Intel's microprocessors ever sold since 2011 (the "California Action").<sup>31</sup> Despite VLSI's aggressive litigation strategy in that case, it suffered numerous setbacks, including losing various discovery- and damages-related disputes. After the PTAB instituted *inter partes* review proceedings to evaluate the patentability of the claims in six of the asserted patents, the parties stipulated to a stay of the Northern District of California case in March 2019.

99. Apparently unhappy with the setbacks it was encountering in the Northern District of California, VLSI also set its sights on Delaware. On June 28, 2018, VLSI filed suit in the District of Delaware asserting five different patents against many of the same products accused in the California Action (the "Delaware I Action").<sup>32</sup> In the past year, the Delaware I Action has imposed substantial burdens on Intel: the parties have engaged in extensive discovery, with Intel having produced over a million pages of documents related to the accused products and 2.5 TB of source code, and thousands of pages of noninfringement and invalidity contentions.

100. On March 1, 2019—*the same day* that VLSI agreed to stay the California Action—VLSI filed yet another suit in the District of Delaware, asserting six new patents against many of the same products at issue in the previous cases (the "Delaware II Action").<sup>33</sup>

101. Evidently concerned that the Delaware I Action and the Delaware II Action might be consolidated, VLSI again abandoned its litigation in hopes of obtaining a favorable outcome elsewhere. On April 11, 2019, just hours after Intel filed its reply brief in support of its motion to consolidate—and without any warning—VLSI voluntarily dismissed the Delaware II Action and,

---

<sup>31</sup> *VLSI Tech. LLC v. Intel Corp.*, No. 5:17-cv-05671 (N.D. Cal.) (BLF).

<sup>32</sup> *VLSI Tech. LLC v. Intel Corp.*, No. 1:18-cv-00966 (D. Del.).

<sup>33</sup> *VLSI Tech. LLC v. Intel Corp.*, No. 1:19-cv-00426 (D. Del.).

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 *that same day*, filed three suits in the Western District of Texas (the “Texas Actions”),<sup>34</sup> asserting  
2 the same six patents at issue in the Delaware II Action, as well as two additional patents.

3 102. VLSI claims up to \$7.1 billion in connection with eight patents in the California  
4 Action and multiple billions of dollars in damages in the Delaware I Action. These inflated  
5 numbers are a product of transferring the patents to VLSI and employing them in Fortress’s  
6 unlawful aggregation scheme, including the fact that VLSI does not invent, produce, or sell any  
7 products. For example, before VLSI acquired certain of the patents asserted against Intel in the  
8 Delaware I Action, [REDACTED]

9 [REDACTED]  
10 [REDACTED]

11 103. VLSI, at Fortress’s direction, can and does take advantage of the fact that it  
12 produces nothing at all and therefore has no desire or need for dispute resolution. Because VLSI’s  
13 litigation costs and risks are trivial in comparison with those of the product companies it sues, it  
14 can afford to bring these types of serial suits based on weak or low-value patents under the theory  
15 that even a modest settlement for supracompetitive royalties will be profitable.

16 104. As a non-practicing entity, VLSI cannot credibly seek injunctions in U.S. litigation  
17 under the Supreme Court’s decision in *eBay Inc. v. MercExchange, LLC*, 547 U.S. 388  
18 (2006). Faced with this problem, VLSI is seeking to enjoin Intel in multiple litigations in China,  
19 as leverage to coerce Intel to accept unreasonable licensing terms—including for its U.S. patents—  
20 or face the risk of having its business shut down.

21 **C. INVT**

22 105. [REDACTED]

23 [REDACTED]  
24 [REDACTED]

25 Following that offer, Apple  
26 and Inventergy engaged in licensing negotiations.

27 <sup>34</sup> *VLSI Tech. LLC v. Intel Corp.*, No. 6:19-cv-00254 (W.D. Tex.); *VLSI Tech. LLC v. Intel Corp.*,  
28 No. 6:19-cv-00255 (W.D. Tex.); *VLSI Tech. LLC v. Intel Corp.*, No. 6:19-cv-00256 (W.D. Tex.).

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1           106. INVT sued Apple and HTC in May 2017 in the District of New Jersey. INVT has  
2 asserted eight SEPs that it claims are essential to cellular standards and are subject to FRAND  
3 commitments. On August 29, 2017, INVT filed suit against ZTE Corporation (“ZTE”), in which  
4 it has asserted the same eight patents.

5           107. [REDACTED]  
6 [REDACTED]  
7 [REDACTED]

8           [REDACTED] Apple nonetheless informed INVT in July 2018 that it remained willing to negotiate and  
9 asked INVT to identify the specific patents it was seeking to license.

10           108. Before responding to Apple’s request and apparently dissatisfied with the pressure  
11 it could exert through district court litigation alone, on September 14, 2018, INVT asserted five of  
12 the patents from the District of New Jersey action against Apple, HTC, and ZTE in the  
13 International Trade Commission seeking an order excluding the accused products from  
14 importation into the United States.

15           109. The International Trade Commission delegated to the Administrative Law Judge  
16 overseeing the litigation the responsibility to assess the implications for the public interest of INVT  
17 seeking an exclusion order on FRAND-committed patents. An evidentiary hearing in the case was  
18 held in September 2019. The Commission’s target date for issuing a decision on whether to  
19 exclude the defendants’ accused products from importation is June 15, 2020.

20           **D. DSS**

21           110. Backed by Fortress funds, DSS sued Intel on February 16, 2015, in the Eastern  
22 District of Texas, asserting two patents. DSS also named Dell Inc., GameStop Corp., Conn’s Inc.,  
23 Conn Appliances, Inc., NEC Corporation of America, Wal-Mart Stores Inc., Wal-Mart Stores  
24 Texas, LLC, and AT&T, Inc. as defendants in the suit.

25           111. Intel then petitioned the PTAB to assess in *inter partes* review proceedings whether  
26 the claims of the asserted patents were patentable. The PTAB instituted the proceedings, and Intel  
27 and DSS agreed to stay the litigation pending the outcome of those *inter partes* reviews.  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

112. In final written decisions issued on June 1, 2017, the PTAB held that all challenged claims (which included the claims DSS had asserted against Intel) were unpatentable. DSS and Intel jointly requested that the litigation stay continue pending appeal.

113. In January 2019, Intel and DSS entered into a settlement, and the district court litigation was dismissed.

**E. IXI IP**

114. IXI R&D and IXI IP (collectively, “IXI”) brought suit, in the Southern District of New York, against Samsung and BlackBerry Limited and BlackBerry Corporation (“BlackBerry”) on June 17, 2014 and June 18, 2014 respectively, on the same set of four patents in each case. IXI voluntarily dismissed without prejudice their complaint against BlackBerry on February 5, 2019.

115. IXI also sued Apple on the same patents on October 2, 2014 in the Southern District of New York. On May 11, 2015, IXI and Apple jointly stipulated to dismiss with prejudice one of the patent claims at issue in the case.

116. On December 21, 2016, the PTAB found unpatentable every asserted claim of one of the remaining patents-in-suit in *inter partes* review proceedings.<sup>35</sup> While the PTAB’s decision was on appeal, IXI filed an *ex parte* reexamination of the patent. The patent issued from reexamination with one amended claim and 68 new claims. U.S. Patent No. 7,039,033 (requested Mar. 24, 2017) (issued Feb. 1, 2018). IXI obtained the reexamined claims by adding trivial additional limitations—like a “speaker,” a “microphone,” and a “touchscreen”—that make the new claims no more novel than the canceled claims.

117. Similarly, on December 21, 2016, the PTAB found unpatentable all but one of the asserted claims of another asserted patent, U.S. Patent No. 7,295,532 (the “’532 patent”).<sup>36</sup> The USPTO thereafter instituted a reexamination of the ’532 patent challenging, among other claims, the sole originally-asserted claim that was not instituted as part of the *inter partes* review. In the subsequent *ex parte* reexamination proceedings, all challenged claims, including the lone

<sup>35</sup> See IPR2015-01444, Paper 27 (PTAB Dec. 21, 2016).

<sup>36</sup> See IPR2015-01443, Paper 27 (PTAB Dec. 21, 2016).

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 remaining originally-asserted claim, currently stand rejected.<sup>37</sup> In response, IXI is seeking to add  
2 numerous new claims and argues for patentability of the challenged claims.

3 118. IXI subsequently moved to amend its infringement contentions in the litigation  
4 against Apple to assert certain unspecified newly-issued claims of the '033 patent and additional  
5 unspecified claims that have not yet even been allowed by the USPTO of the '532 patent.<sup>38</sup> IXI  
6 thereby seeks to restart the litigation that it comprehensively lost five years after the complaint was  
7 filed. Apple opposed IXI's motion, arguing that IXI's attempt to insert reexamined claims into  
8 the litigation should be barred by res judicata.<sup>39</sup> The court denied IXI's motion to amend its  
9 infringement contentions, but it did not decide whether res judicata bars IXI from asserting its  
10 reexamined claims against Apple. Apple and Samsung subsequently filed complaints seeking a  
11 declaratory judgment that res judicata bars IXI from asserting the reexamined claims and, in the  
12 alternative, that the reexamined claims are not infringed and are invalid.

13 119. Apple also filed *inter partes* review petitions on the reexamined claims of the '033  
14 patent in 2018, but the PTAB denied institution because—even though the new claims did not  
15 exist during the year after the complaint was filed—the PTAB concluded that the petitions were  
16 time-barred.<sup>40</sup> IXI thus attempts to immunize its patent from *inter partes* review challenge.

17 **F. Seven Networks**

18 120. In May 2017, Seven Networks sued ZTE and Samsung in the Eastern District of  
19 Texas on the same set of seven patents in both cases and also asserted those patents plus three  
20 others against Google. Seven Networks voluntarily dismissed its case against ZTE a month later  
21 before refiling the same patents. In November 2018, Seven Networks asserted another group of  
22 six patents against Samsung and Google.

23  
24  
25 <sup>37</sup> Office Action (mailed Sept. 25, 2018).

26 <sup>38</sup> *IXI Mobile (R&D) Ltd. v. Apple Inc.*, Case No. 4:15-cv-3755 (N.D. Cal. Mar. 7, 2019) (HSG),  
Dkt. 157.

27 <sup>39</sup> *Id.*, Dkt. 164.

28 <sup>40</sup> *Apple Inc., v. IXI IP, LLC*, IPR2019-00124, Paper 13 (PTAB Jun. 3, 2019).

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1           121. Seven Networks eventually obtained settlements with ZTE, Samsung, and  
2 Google.<sup>41</sup>

3           122. Seven Networks sued Apple on April 10, 2019 in the Eastern District of Texas,  
4 asserting sixteen patents against Apple related to a wide range of Apple products and services. Per  
5 the complaint, Seven Networks is listed as the “assignee of all rights, title, and interest in” for each  
6 of the sixteen patents-in-suit.

7           **G. KIP CR P1**

8           123. Since receiving a loan from Fortress Credit in 2013, Crossroads has asserted eight  
9 separate patent actions in the Western District of Texas against Dot Hill Systems Corp.; Oracle  
10 Corporation; Huawei Technologies Co., Ltd.; Huawei Enterprise USA, Inc.; Huawei Technologies  
11 USA, Inc.; Cisco Systems, Inc.; NetApp, Inc.; and Quantum Corporation claiming infringement  
12 of some combination of U.S. Patent Nos. 6,425,035 (the “’035 patent”), 7,051,147 (the “’147  
13 patent”), 7,934,041 (the “’041 patent”), and 7,987,311 (the “’311 patent”). Specifically,  
14 Crossroads alleged in each of the eight actions that the ’035 patent was infringed, and in seven of  
15 the actions that the ’041 patent was infringed.

16           124. In final written decisions dated January 29, 2016 and March 17, 2016, the PTAB  
17 found in *inter partes* review proceedings all asserted claims of the asserted ’035 and ’041 patents  
18 were invalid. The U.S. Court of Appeals for the Federal Circuit affirmed that decision on June 6,  
19 2017.

20           125. Fortress and KIP CR P1 agreed to step into the place of Crossroads in these  
21 litigations notwithstanding the PTAB and Federal Circuit findings. Fortress’s subsequent writs of  
22 certiorari to the Supreme Court challenging the constitutionality of the PTAB’s *inter partes* review  
23 process were denied on April 30, 2018. Each of these actions was ultimately dismissed.

28 Dkt. 67; *Seven Networks, LLC v. Google LLC*, No. 2:17-cv-442 (E.D. Tex. Jan. 20, 2019), Dkt.  
608.

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED****III. SEP TRANSFER SCHEMES**

126. As described above, INVT and Uniloc 2017 hold what they claim are SEPs for cellular standards and that are subject to commitments to license on FRAND terms.

**A. Cellular Standards and the Risks of Standard Setting**

127. Standards, such as LTE, are created and publicly distributed by standard setting organizations (“SSOs”). Industry standards provide potential benefits by allowing devices made by different companies to communicate with each other because these devices support the same standard. But standards also present risks of harm to competition and consumers when patent holders claim to have patents essential to the standards—*i.e.*, the standard cannot be practiced without using the patent—and exploit those patents to demand excessive royalties or hold up companies that use the standard. Before a standard is set, the SSO can choose different ways of implementing particular functionality within the standard. But once the standard is set and technology to perform a particular functionality is incorporated in the standard, users of the standard become “locked in” to using that technology through their investment in products and services that support the standard. This “lock-in” effect creates a risk that patent holders claiming to have essential patents will attempt to exploit their patents by demanding excessive royalties or seeking to enjoin the use of their patents. In particular, SEP holders may seek royalties that do not reflect the incremental value of their patents (which may cover only a fraction of the matter addressed in a given standard) but instead are based on the user’s investments in supporting the standard.

128. The risk of exploitative SEP licensing conduct is exacerbated by the fact that SSOs typically make no evaluation of whether a claimed-essential patent is actually essential.

129. In response to this risk of exploitative behavior, SSOs have adopted licensing commitments that govern patents claimed to be essential to a standard. Many SSOs impose a requirement that patent holders claiming to have essential patents timely disclose those patents to the SSO and commit to license them on FRAND terms and conditions.

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1           130. FRAND royalties for SEPs should reflect the ex ante value of the technology  
2 covered by the SEP before standardization, when alternative means of performing the functions  
3 purportedly covered by the patented technology were available. That is, FRAND royalties should  
4 be apportioned so that they do not reflect any value attributable to adoption in the standard of the  
5 feature covered by the SEP or unpatented features within the standard.

6           **B. ETSI and Its Intellectual Property Rights Policy**

7           131. ETSI is an independent, non-profit SSO that produces globally-accepted standards  
8 for the telecommunications industry. ETSI has more than 800 members from over 60 countries  
9 across five continents. ETSI created or helped to create many telecommunication standards,  
10 including the 2G (e.g., GSM), 3G (e.g., WCDMA/UMTS), and 4G (LTE) cellular communication  
11 standards.

12           132. Along with six other regional SSOs, ETSI is an Organizational Partner in the Third  
13 Generation Partnership Project (“3GPP”). 3GPP produces technical specifications that are adopted  
14 as standards by Organizational Partners, such as ETSI. 3GPP was created to oversee work on  
15 global 3G cellular specifications and has subsequently worked on creating 4G specifications. The  
16 3GPP Organizational Partners agreed that members of a particular Organizational Partner would  
17 be bound by the intellectual property rights (“IPR”) policy of that Organizational Partner when  
18 participating at 3GPP.

19           133. ETSI has adopted an IPR Policy, incorporated as Annex 6 of the ETSI Rules of  
20 Procedure. The ETSI IPR Policy is governed by the laws of France and provides that “[a]ny right  
21 granted to, and any obligation imposed on, a MEMBER which derives from French law and which  
22 are not already contained in the national or supranational law applicable to that MEMBER is to be  
23 understood as being of solely a contractual nature.”

24           134. Among other requirements, the ETSI IPR Policy obligates members to disclose to  
25 ETSI and its members patents and patent applications that a member believes are or may become  
26 essential to an ETSI standard. Once such a disclosure is made, the member is requested to submit  
27  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 an irrevocable undertaking confirming its willingness to license the IPRs it has disclosed on  
2 FRAND terms and conditions.

3 135. Specifically, Clause 4.1 of the ETSI IPR Policy provides as follows regarding the  
4 disclosure obligation at ETSI:

5 Subject to Clause 4.2 below, each MEMBER shall use its reasonable  
6 endeavours, in particular during the development of a STANDARD  
7 or TECHNICAL SPECIFICATION where it participates, to inform  
8 ETSI of ESSENTIAL IPRs in a timely fashion. In particular, a  
9 MEMBER submitting a technical proposal for a STANDARD or  
TECHNICAL SPECIFICATION shall, on a bona fide basis, draw  
the attention of ETSI to any of that MEMBER's IPR which might  
be ESSENTIAL if that proposal is adopted.

10 136. In its second sentence, Clause 4.1 imposes a "particular" requirement on members  
11 submitting a technical proposal to disclose the existence of any potentially essential IPR when a  
12 proposal is made and no later than when the standard has been adopted.

13 137. The disclosure requirement under Clause 4.1 of the ETSI IPR Policy is intended to  
14 ensure that when ETSI members (or participants at 3GPP) are deciding on the content of a  
15 particular standard specification, they understand that there is IPR that may potentially be  
16 implicated if certain technology is standardized. This knowledge allows members to make choices  
17 regarding technologies to standardize with a more informed understanding of the consequences of  
18 their choices. ETSI and its members rely on the safeguards of the disclosure and FRAND licensing  
19 obligation to ensure the viability and commercial potential of the standards adopted by ETSI.

20 138. The ETSI IPR Policy further requests that SEP owners submit an irrevocable  
21 written undertaking that they are prepared to grant irrevocable licenses on "fair, reasonable, and  
22 non-discriminatory" or FRAND terms and conditions. Clause 6.1 states:

23 When an ESSENTIAL IPR relating to a particular STANDARD or  
24 TECHNICAL SPECIFICATION is brought to the attention of  
25 ETSI, the Director-General of ETSI shall immediately request the  
26 owner to give within three months an irrevocable undertaking in  
writing that it is prepared to grant irrevocable licences on fair,  
reasonable and non-discriminatory ("FRAND") terms and  
conditions under such IPR to at least the following extent:

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1           ● MANUFACTURE, including the right to make or have made  
2 customized components and sub-systems to the licensee's own  
3 design for use in MANUFACTURE;

4           ● sell, lease, or otherwise dispose of EQUIPMENT so  
5 MANUFACTURED;

6           ● repair, use, or operate EQUIPMENT; and

7           ● use METHODS.

8           The above undertaking may be made subject to the condition that  
9 those who seek licences agree to reciprocate.

10           139. ETSI's IPR Policy was designed to benefit all ETSI members, as well as all other  
11 parties (including manufacturers and consumers) that supply products that support an ETSI  
12 standard. In particular, the Policy describes in Clause 3.1 that it has the objective to "reduce the  
13 risk" to those implementing the standards or other technical specifications "that investment in the  
14 preparation, adoption and application of the STANDARDS could be wasted as a result of an  
15 ESSENTIAL IPR for a STANDARD or TECHNICAL SPECIFICATION being unavailable."

16           140. Through disclosure of potentially essential IPRs and obtaining FRAND  
17 commitments for them, ETSI can include technology in its standards that may be covered by IPRs  
18 with confidence that hold-up tactics by owners of declared SEPs will not undermine the subsequent  
19 widespread adoption of the standards. If ETSI becomes aware of a potentially essential IPR for  
20 which a FRAND undertaking is not made, the IPR Policy requires that ETSI avoid standardizing  
21 the technology claimed by that IPR. In particular, Section 8.1.1 of the ETSI IPR Policy provides  
22 that ETSI must take steps to ensure that a "viable alternative technology" is available where IPR  
23 cannot be licensed on FRAND terms and conditions:

24           Where prior to the publication of a STANDARD or a TECHNICAL  
25 SPECIFICATION an IPR owner informs ETSI that it is not prepared  
26 to license an IPR in respect of a STANDARD or TECHNICAL  
27 SPECIFICATION in accordance with Clause 6.1 above, the General  
28 Assembly shall review the requirement for that STANDARD or  
29 TECHNICAL SPECIFICATION and satisfy itself that a viable  
30 alternative technology is available for the STANDARD or  
31 TECHNICAL SPECIFICATION which:

32           - is not blocked by that IPR; and

33           - satisfies ETSI's requirements

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

141. Apple is an ETSI member through the participation of its European subsidiaries. The ETSI IPR Policy defines a “MEMBER” as including the member’s “affiliates,” which includes those entities owned or controlled by a member.

**C. Holders of Declared SEPs Have Monopoly Power In Input Technology Markets For Standardized Functionalities**

142. Each cellular standard developed by ETSI or 3GPP consists of many different technologies that perform a variety of functions. The technologies that perform each of these functions are essential inputs into the manufacture and supply of products and services that support the standards.

143. In the process of developing cellular specifications and standards, ETSI and 3GPP participants choose particular technology to provide each individual function encompassed by the standards. ETSI and 3GPP participants evaluate whether to standardize particular proposed functions and, if so, which viable, alternative competing technologies to select to perform those functions.

144. Once a standard, like LTE, is adopted, the viability of using alternative technologies that are not standardized to perform functions included in the standard is constrained or eliminated. That is, standardization constrains or eliminates as substitutes all the technologies that would have been capable of performing the functionality in the standard but that were not chosen to perform that function. Parties supplying products that support the standard, such as Apple, become “locked-in” to the standardized technology.

145. If a technology selected for inclusion in the standard is protected by patents, the patent owner controls the supply of that particular input technology for the standard. This is true for each function comprising the standard for which patented technology was selected.

146. The functionality for cellular standards associated with each input technology comprises its own relevant market for antitrust purposes (individually, an “Input Technology Market,” and collectively, the relevant “Input Technology Markets”). Fortress, INVT, and Uniloc 2017 hold monopoly power in the various Input Technology Markets for the various functions

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 claimed to be covered by their declared SEPs. That is because, post-standardization, formerly  
2 viable alternative technologies are no longer viable because of the lock-in effect of standards  
3 discussed above.

4 147. Cellular standards are employed throughout the world and alternative technologies  
5 competing to be incorporated into the cellular standards were offered by suppliers from around the  
6 world. Accordingly, the geographic scope of each of the relevant Input Technologies Markets  
7 described above is worldwide.

8 148. SEP holders have the power to raise prices and exclude competition with respect to  
9 each of the technologies covered by their patents and incorporated in the relevant standard. An  
10 Input Technology Market has high barriers to entry because the standardization process eliminates  
11 the viability of alternative technologies as substitutes to perform the standardized functionality in  
12 the Input Technology Market.

13 149. Simply by asserting that they have large portfolios of essential patents, INVT and  
14 Uniloc 2017 can obtain royalties or other licensing terms for the patents above what they could  
15 have obtained before ETSI or 3GPP standardized the technology that INVT and Uniloc 2017  
16 claims is covered by their patents. INVT and Uniloc 2017 have such hold-up power because  
17 without a license, a party supplying products that support the relevant cellular standards risks being  
18 unable to market those products and having its entire business put in peril.

19 **D. Fortress, INVT, and the Uniloc Defendants' Anticompetitive SEP Transfer**  
20 **Schemes**

21 150. INVT acquired SEPs from Panasonic subject to obligations for INVT to share with  
22 Panasonic the royalties it obtains from licensees. Uniloc Luxembourg received SEPs that  
23 originated with Philips, to which Uniloc Luxembourg granted Uniloc USA rights to be an  
24 exclusive licensee, and which it later transferred to Uniloc 2017.

25 151. Transferring SEPs from an operating company that supplies its own products and  
26 participates in SSOs to a PAE allows the PAE to escape the protections for licensees to which  
27 licensors agree through making a FRAND commitment. When an operating company demands  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 royalties for patents it has declared essential to industry standards, it faces bounds on the reach of  
2 its demands because it remains an operating company and an SSO participant. As an operating  
3 company that sells its own products or services, it remains subject to assertion of patents against  
4 it by potential licensees. Thus, for example, an operating company would face constraints in  
5 demanding non-FRAND royalties or otherwise failing to adhere to a FRAND commitment because  
6 it could be subject to reciprocal demands or conduct from other SEP holders.

7 152. And, as SSO participants, operating companies have reputational interests at stake  
8 that may be injured though directly breaching their FRAND commitments. Such conduct will  
9 make SSOs and their members less likely to standardize the operating company's technology in  
10 future standards. By transferring SEPs to PAEs, operating companies avoid these constraints and  
11 enlist PAEs that are not subject to the same constraints to exploit the monopoly power associated  
12 with their claimed SEPs.

13 153. Patent transfer schemes like INVT's and the Uniloc Defendants' frustrate the  
14 purposes of the FRAND commitment in another way. By transferring portions of the SEP  
15 portfolios of operating companies to PAEs for the purpose and with the effect of driving up  
16 transaction costs and evading FRAND commitments, the scheme not only introduces inefficiencies  
17 but also makes it impossible for Apple and other device suppliers to license all of an operating  
18 company's declared SEPs in a single license. Apple had previously paid Panasonic for a license  
19 to certain of its W-CDMA SEPs through the W-CDMA patent pool administered by Sipro Lab  
20 Telecom. In addition, Apple entered a license agreement with Philips in 2012 that granted Apple  
21 a license to certain Philips patents. But Philips had already transferred one of those patents at the  
22 time of the license (without retaining a right to license Apple) and, after further transfers, it  
23 ultimately ended up with Uniloc 2017. In litigation against Apple, Uniloc 2017 claims that Apple's  
24 cellular devices infringe the transferred patent because they support 3G and LTE standards, thus  
25 relying on the purported essentiality of the transferred patent. In litigation between Apple and  
26 Philips about the scope of their license, however, Philips claims that the transferred patent is not  
27  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 commercially or technically essential and, therefore, does not fall within the scope of the 2012  
2 license agreement.

3 154. The transfer of SEPs from operating companies to PAEs to engage in abusive  
4 licensing undermines standard-setting's procompetitive purposes of facilitating wide adoption of  
5 industry standards on economically reasonable terms, and, instead, transforms standard-setting  
6 into a mechanism for holding up and extracting exorbitant royalties from product suppliers,  
7 bringing immediate harm to product suppliers and end consumers through higher prices and  
8 reduced innovation and quality. Over the long run, abusive patent transfer schemes, like INVT  
9 and the Uniloc Defendants have employed here, chill standard-setting activities and the  
10 procompetitive benefits they bring.

11 155. There is no procompetitive justification for the anticompetitive transfer of SEPs to  
12 INVT and the Uniloc Defendants. To the extent INVT and the Uniloc Defendants assert that any  
13 procompetitive justifications exist, such purported justifications are outweighed by the  
14 anticompetitive effects in the markets alleged herein or could have been obtained in a substantially  
15 less restrictive way.

16 **IV. FORTRESS AND THE OTHER DEFENDANTS HAVE HARMED**  
17 **COMPETITION IN A MARKET FOR PATENTS FOR HIGH-TECH CONSUMER**  
18 **AND ENTERPRISE ELECTRONIC DEVICES AND COMPONENTS OR**  
**SOFTWARE THEREIN AND PROCESSES USED TO MANUFACTURE THEM**

19 156. Fortress and the other Defendants, through their anticompetitive conduct, have  
20 harmed competition in an antitrust market for patents for high-tech consumer and enterprise  
21 electronic devices and components or software therein and processes used to manufacture them,  
22 the "Electronics Patents Market."

23 157. The Electronics Patents Market constitutes a relevant patent licensing market where  
24 Fortress (either directly through its PAE subsidiaries or by acting in concert with the PAEs in  
25 which it invests) and other holders of patents claimed to read on electronic devices demand that  
26 suppliers of electronic products license their patents.  
27  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1           158. The geographic scope of the Electronics Patents Market is the United States, as  
2 patents are national in scope.

3           159. Fortress has market power in the Electronics Patents Market based on the number  
4 of patents that Fortress and its PAEs have aggregated, the means by which Fortress and Defendants  
5 hold and assert those patents, and the other anticompetitive conduct described above and below.

6           160. The supracompetitive licensing returns Fortress's PAEs have obtained are direct  
7 evidence of its market power. For example, the Uniloc Defendants have been able to coerce  
8 several parties (including Amazon.com, Inc. and Huawei Device Co. Ltd.) to license its patents,  
9 even though its patents have repeatedly been shown to lack merit. Fortress has been able to acquire  
10 patents at costs below their hold-up value and then, through the benefit of its anticompetitive  
11 scheme, extract higher payments from licensees that reflect hold-up value rather than the actual  
12 value of the patents based on their technical and commercial merits.

13           161. Defendants' demands also show that Fortress has the power to control prices in the  
14 Electronics Patents Market. As detailed above, Fortress-backed entities have sought billions of  
15 dollars from Intel and Apple.

16           162. By creating a massive portfolio, Fortress decreases the importance of any particular  
17 patent held by its PAEs because, given the size of the portfolio, it becomes exceedingly difficult  
18 for any potential licensee to meaningfully analyze the patents in the portfolio in a systematic  
19 fashion. Thus, the size of the aggregated portfolio imposes substantial costs for suppliers of  
20 electronic devices to design or work around no matter the merits of the constituent patents. Further,  
21 as described above, Fortress's PAEs assert their patents to read broadly on the accused products  
22 in ways that are facially invalid, but that Fortress's PAEs also claim make it infeasible to design  
23 around. Moreover, the features of products accused of infringement by Fortress's PAEs may be  
24 difficult or impossible to modify because of the extremely high switching costs involved given the  
25 investments that have already been made in product design and production. For example, a report  
26 for the Uniloc Luxembourg board of directors indicates that litigation "campaigns are launched  
27 when the relevant technology reaches a well-monetized status." Even if Apple, Intel, and other  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 targets of Fortress-backed assertions have had success in invalidating or proving non-infringement  
2 of certain Fortress-backed patents, Fortress and its PAEs just turn to the next patent in the portfolio  
3 to assert. Fortress and its PAEs exploit that dynamic to shield from scrutiny their patents and to  
4 extract royalties based on the size of the portfolio (including by distributing it among multiple  
5 PAEs to assert) rather than its quality. Further, the asserted SEPs held by INVT and Uniloc 2017,  
6 by definition, claim to cover essential technology that it would generally not be feasible to design  
7 around if they are actually essential.

8       163. Thus, the power of Fortress's patent portfolio is not based on the value or lawful  
9 scope of its constituent patents, but on the size of the portfolio itself, which imposes hurdles to  
10 design around regardless of the merits of the patents within it, and its distribution among aggressive  
11 PAEs. That size allows Defendants to threaten serial litigation and impose uncertainty on their  
12 victims regardless of the merits of the asserted patents, which become secondary to the sheer size  
13 of the portfolio. Accordingly, the targets of Defendants' assertions have no choice but to buy  
14 licenses from Defendants or to face endless, meritless litigation. Before aggregation, the holders  
15 of meritless patents lacked the same incentives to assert them as do Fortress and its PAEs. But, to  
16 the extent that they had asserted them, litigation would have been a viable possibility for the targets  
17 to address those assertions. In their aggregation and serial assertion strategy, however, Defendants  
18 are not dissuaded by repeated litigation failures from asserting ever more patents.

19       164. Fortress's aggregation of patents also decreases access to any patents that Fortress  
20 controls for which a licensee might actually want a license to use the technology in the patent.  
21 Before aggregation, those patents could have been the subject of licensing discussions focusing on  
22 the merits of the patents and that would have promoted use of the technology. But by aggregating  
23 potentially valuable patents in a huge portfolio with meritless patents in an anticompetitive  
24 scheme, Fortress and the other Defendants obscure those patents from the market and reduce the  
25 availability of information. Thus, rather than increasing efficiency and enhancing output, the  
26 scheme has the opposite effect—the value of meritless patents is enhanced and the value of any  
27  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 patents in which there might have been interest in practicing is decreased, thereby reducing  
2 innovation and output.

3 165. There is no procompetitive justification for the anticompetitive aggregation of  
4 patents by Fortress and its PAEs. To the extent Defendants assert that any procompetitive  
5 justifications exist, such purported justifications are outweighed by the anticompetitive effects in  
6 the markets alleged herein or could be obtained through less restrictive means. For example, the  
7 operating companies that transferred patents to Fortress's PAEs would have been capable of  
8 licensing their own patents. As an example, Nokia, which transferred patents to Inventergy,  
9 reported in its 2018 annual report that "Our Patent Business continues to grow its successful patent  
10 licensing and monetization activities" and that Nokia was a party to more than 100 patent licenses.

11 **V. THE ANTICOMPETITIVE EFFECTS OF DEFENDANTS' SCHEME**

12 166. As set forth above, Fortress possesses market power in the Electronics Patents  
13 Market. Further, Fortress, INVT, and Uniloc 2017 possess monopoly power for their SEPs in the  
14 Input Technology Markets that perform each of those standardized functions.

15 167. Putting aside market definition, direct evidence demonstrates the adverse effects on  
16 competition of the anticompetitive conduct of Fortress and the other Defendants through  
17 aggregation (as described above and below). In particular, through their aggregation scheme,  
18 Fortress and the other Defendants seek and/or obtain far more for their patents than the costs at  
19 which they acquired those patents or the rates at which they would have been licensed before  
20 aggregation.

21 168. Fortress and its PAEs' anticompetitive scheme—including patent aggregation,  
22 ownership by an array of aggressive PAEs, baseless litigation, and efforts to evade FRAND  
23 commitments—has led to anticompetitive effects, reduced output, the creation and enhancement  
24 of market power in the Electronics Patents Market and creation and enhancement of monopoly  
25 power in the Input Technology Markets. Fortress and the other Defendants' conduct has harmed  
26 and continues to harm competition in interstate commerce.

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1           169. In particular, Defendants’ illegal scheme has resulted in inflated licensing  
2 royalties—i.e., higher prices—and imposed burdens, costs, and uncertainties for Intel, Apple, and  
3 other purchasers in the Electronics Patents Market and each of the Input Technology Markets. The  
4 purchasers in those markets include electronic device suppliers (e.g., of smartphones, tablets, and  
5 computers, such as those offered by Apple) and providers of components for such devices (e.g.,  
6 processors and chipsets, such as those offered by Intel) that are potential and actual licensees. In  
7 addition, as a result of the illegal conduct of Fortress and the other Defendants, U.S. and other end  
8 consumers have been harmed and face a continuing threat of increased prices and reduced  
9 innovation and quality for electronic devices.

10           170. Defendants’ illegal conduct causes obvious harm to licensees such as Intel and  
11 Apple—i.e., customers in the Electronics Patents Market and/or in the Input Technology  
12 Markets—when they are compelled to pay inflated royalties. Licensing customers are also  
13 harmed, even when they do not acquiesce to an inflated royalty, by being forced to incur substantial  
14 expenses, uncertainty, and burdens in resisting the patent litigations and threats that the  
15 aggregation and transfer schemes of Defendants have enabled. For example, Intel and Apple have  
16 spent millions of dollars to date on outside resources (including counsel, experts, and vendors) to  
17 defend against Fortress-backed demands and assertions. Intel and Apple have also each been  
18 harmed by the enormous amounts of time their employees have been forced to spend on these  
19 matters, including negotiating with Defendants as well as collecting information and documents  
20 and preparing for depositions, rather than doing their jobs. As an example, in litigation brought  
21 by Uniloc USA and Uniloc Luxembourg, those Defendants have already deposed eight Apple  
22 engineers, two human resource witnesses, and one Apple licensing witness. Similarly, in Intel’s  
23 litigation against VLSI in Delaware, Intel’s disclosures identify twenty-five Intel employees with  
24 knowledge relevant to the litigation, including engineers and employees in the marketing and  
25 finance departments. An employee identified in such disclosures is typically deposed,  
26 necessitating at least two full days dedicated to the litigation between preparation and sitting for  
27 the deposition, in addition to other time dedicated to identifying relevant documents or providing  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 information to counsel on the facts of the case. Defendants have employed the strategies set forth  
2 herein to impose these costs on licensees and to use their leverage to extract unreasonable and  
3 unjustified royalties. Intel and Apple continue to experience the unlawful effects of Defendants'  
4 unlawful conduct so long as they are subject to litigation by Fortress-backed patents.

5 171. For declared SEPs specifically, Fortress, INVT, and the Uniloc Defendants'  
6 FRAND evasion has led to precisely the sort of anticompetitive effects that ETSI's IPR Policy was  
7 designed to avoid, leading to inflated prices in Input Technology Markets associated with their  
8 declared SEPs, as well as higher prices and reduced innovation and quality for downstream  
9 purchasers. The transfer of those SEPs to PAEs in exchange for a share of licensing revenue has  
10 imposed exorbitant non-FRAND royalties (or heavy costs in trying to avoid such royalties) on  
11 Apple and other suppliers of products that support cellular standards. This has led to inflated prices  
12 in Input Technology Markets associated with INVT and the Uniloc Defendants' declared SEPs, as  
13 well as higher prices and reduced innovation and quality for consumers of cellular products.  
14 Moreover, the illicit SEP transfer scheme has chilled, and, if not enjoined, will continue to chill  
15 procompetitive standard-setting, to the detriment of industry and American and other consumers  
16 alike.

**FIRST COUNT****Agreements to Restrain Competition in Patent Licensing****(Section 1 of the Sherman Act)****(Claim Against Fortress, Fortress Credit, Uniloc USA, Uniloc Luxembourg,  
Inventergy, DSS, and IXI IP )**

21 172. Intel and Apple repeat and reallege the allegations of the preceding and subsequent  
22 paragraphs as if fully set forth herein.

23 173. As alleged above, Fortress and Fortress Credit reached agreements with various  
24 parties, including Uniloc USA, Uniloc Luxembourg, Inventergy, DSS, and IXI IP (collectively the  
25 "Agreeing Parties"), to aggregate patents under Fortress's control and to assert patents to increase  
26 the total royalties obtained from licensing the Fortress-backed patents. Fortress and each of the  
27  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 Agreeing Parties intended that through their agreements they would extract royalties from their  
2 targets—like Intel and Apple—beyond the royalties that could have been obtained but for  
3 aggregation by Fortress.

4 174. The agreements between Fortress and the Agreeing Parties to aggregate patents  
5 substantially raised or threaten to raise prices and have resulted or threaten to result in other  
6 anticompetitive effects, including in the Electronics Patents Market, and for downstream products  
7 sold to consumers. The agreements have substantially affected interstate commerce.

8 175. The agreements to aggregate and assert patents generated no efficiencies, and in  
9 fact were designed to create inefficiencies in the licensing that Fortress could exploit to harm Intel,  
10 Apple, and other potential licensees, as well as finished product consumers. Any conceivable  
11 efficiencies the agreements may have created were substantially outweighed by their  
12 anticompetitive effects or could have been obtained through substantially less restrictive means.

13 176. As a direct, proximate, and foreseeable result of Fortress and the Agreeing Parties’  
14 unlawful agreements, Intel and Apple have suffered or will suffer harm to their businesses and  
15 property, and, absent an injunction, Intel and Apple will continue to suffer from these effects. Intel  
16 and Apple’s past and continuing harm includes litigation costs, the risk of supracompetitive  
17 licensing rates, business uncertainty, and business resources lost in dealing with the consequences  
18 of the Agreeing Parties’ unlawful agreements.

**SECOND COUNT****Unlawful Asset Acquisitions****(Section 7 of the Clayton Act)****(Claim Against Fortress, Fortress Credit, Uniloc 2017, VLSI, INVT, IXI IP,  
and Seven Networks)**

23 177. Intel and Apple repeat and reallege the allegations of the preceding and subsequent  
24 paragraphs as if fully set forth herein.

25 178. Fortress, Fortress Credit, Uniloc 2017, VLSI, INVT, IXI IP, and Seven Networks  
26 (the “Acquiring Parties”) have acquired numerous patents (or interests in patents), which are assets  
27  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 under Section 7 of the Clayton Act. Those anticompetitive acquisitions include at least those  
2 described in Section I above. The effects of the acquisitions have been to lessen competition  
3 substantially, and to tend to create market power, including in the Electronics Patents Market.  
4 Among other harms, the transfers have significantly enhanced the Acquiring Parties' ability and  
5 incentives to harm competition, including by evading constraints on assertion and creating  
6 incentives to assert patents aggressively and thus increasing the cost and likelihood of litigation.

7 179. As a direct, proximate, and foreseeable result of the Acquiring Parties' unfair and  
8 wrongful conduct, as alleged above, there is a significant threat of inflated royalties to consumers  
9 of licenses to Fortress-backed patents.

10 180. As a direct, proximate, and foreseeable result of the Acquiring Parties' unfair and  
11 wrongful conduct, as alleged above, there is a significant threat of harm to consumers, including  
12 through the inevitable passing on to consumers of the inflated royalties demanded for Fortress-  
13 backed patents. The anticompetitive acquisitions have thus harmed consumers for electronics  
14 products.

15 181. As a direct, proximate, and foreseeable result of the unlawful patent acquisitions,  
16 Intel and Apple have suffered or will suffer harm to their businesses and property, and, absent an  
17 injunction and rescission of these transactions, Intel and Apple will continue to suffer from these  
18 effects. Intel and Apple's past and continuing harm include the risk of supracompetitive licensing  
19 rates, business uncertainty, litigation costs, and business resources lost in dealing with the  
20 consequences of the Acquiring Parties' unlawfully-acquired patents.

**THIRD COUNT****Unfair Competition****(Cal. Bus. & Prof. Code § 17200)****(Claim Against All Defendants)**

25 182. Intel and Apple repeat and reallege the allegations of the preceding and subsequent  
26 paragraphs as if fully set forth herein.  
27  
28

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

183. Defendants have engaged in unfair competition in violation of Cal. Bus. Prof. Code § 17200, et seq. As set forth above, Defendants have engaged in illegal conduct by violating the Sherman and Clayton Acts. That conduct is also unfair in that it violates the spirit and policy of the antitrust laws.

184. As a direct result of Defendants' wrongful conduct, competition has been injured, and, absent an injunction and rescission of these transactions, will continue to be injured, including in the Electronics Patents Market as alleged above. Moreover, this conduct threatens injury to downstream competition for price, innovation, and quality in sales of cellular devices, thereby injuring consumers in California and elsewhere. These threatened injuries include the passing on to consumers of improperly inflated royalties, and decreases in innovation and quality competition.

185. As a direct result of Defendants' illegal conduct, Intel and Apple have suffered economic harm in the form of litigation costs and diversion of resources away from innovation to respond to these entities' serial nuisance suits.

**FOURTH COUNT – BY APPLE ONLY****Unfair Competition****(Cal. Bus. & Prof. Code § 17200)****(Claim Against Fortress, Fortress Credit, Uniloc USA,  
Uniloc Luxembourg, Uniloc 2017, INVT, Inventergy Only)**

186. Apple repeats and realleges the allegations of the preceding and subsequent paragraphs as if fully set forth herein.

187. Fortress, Fortress Credit, Uniloc USA, Uniloc Luxembourg, Uniloc 2017, INVT, and Inventergy have engaged in unfair competition in violation of Cal. Bus. Prof. Code § 17200, et seq. As described below, their conduct violates Section 5 of the Federal Trade Commission Act, 15 U.S.C. § 45. That conduct is also unfair in that it violates the spirit and policy of the antitrust laws.

188. Fortress, Fortress Credit, Uniloc USA, Uniloc Luxembourg, Uniloc 2017, INVT, and Inventergy's unfair business practices include their efforts to evade FRAND commitments

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

1 through the transfer of SEPs to INVT and Uniloc 2017. The acquiring parties would then demand  
2 non-FRAND royalties in violation of those FRAND commitments.<sup>42</sup>

3 189. The United States Federal Trade Commission (“FTC”) enforces Section 5 of the  
4 Federal Trade Commission Act, which is similar to Cal. Bus. & Prof. Code § 17200. Section 5 of  
5 the FTC Act is used as a model in interpreting Cal. Bus. & Prof. Code § 17200.

6 190. The FTC has brought an action under Section 5 where, like here, an acquiring firm  
7 refused to abide by licensing commitments that its predecessor made in connection with industry  
8 standard-setting activities.<sup>43</sup>

9 191. As a direct result of Fortress, Fortress Credit, Uniloc USA, Uniloc Luxembourg,  
10 Uniloc 2017, INVT, and Inventergy’s wrongful conduct, competition has been injured and, absent  
11 an injunction, will continue to be injured, in the Input Technology Markets as alleged above.  
12 Moreover, this conduct threatens injury to downstream competition for price, innovation, and  
13 quality in sales of cellular devices, thereby injuring consumers in California and elsewhere. These  
14 threatened injuries include the passing on to consumers of improperly inflated royalties, and  
15 decreases in innovation and quality competition for cellular devices that comply with relevant  
16 standards by raising costs for innovators to bring products to market via exorbitant, non-FRAND  
17 licensing terms. As a direct result of Fortress, Fortress Credit, Uniloc USA, Uniloc Luxembourg,  
18 Uniloc 2017, INVT, and Inventergy’s illegal conduct, Apple has suffered economic harm in the  
19 form of litigation costs and diversion of resources away from innovation to respond to these  
20 entities’ serial nuisance suits.

**PRAYER FOR RELIEF**

21  
22 Intel and Apple respectfully request the following relief:  
23  
24

---

25 <sup>42</sup> Apple brings this Count only as to conduct relating to patents that INVT and Uniloc 2017 have  
26 not yet asserted against Apple.

27 <sup>43</sup> See Decision and Order, *In the Matter of Negotiated Data Solutions LLC*, File No. 051-0094  
28 (Jan. 23, 2008), available at <https://www.ftc.gov/sites/default/files/documents/cases/2008/01/080122do.pdf>.

**REDACTED VERSION OF DOCUMENT SOUGHT TO BE CONDITIONALLY SEALED**

- a) That Defendants' unlawful conduct be declared a violation of Section 1 of the Sherman Act, 15 U.S.C. § 1; Section 7 of the Clayton Act, 15 U.S.C. § 18; and Cal. Bus. Prov. Code § 17200, et seq.;
- b) That Intel and Apple recover damages against Defendants in an amount to be determined and multiplied to the extent provided by law, including under Section 4 of the Clayton Act;
- c) That all contracts or agreements Defendants entered into in violation of the Sherman Act, Clayton Act, or Cal. Bus. Prov. Code § 17200, et seq. be declared void and the patents covered by those transfer agreements be transferred back to the transferors;
- d) That all patents transferred to Defendants in violation of the Sherman Act, Clayton Act, or Cal. Bus. Prov. Code § 17200, et seq. be declared unenforceable;
- e) Award to Intel and Apple their costs and expenses associated with this case, together with interest; and
- f) Grant such other and further relief as the Court may deem just and proper under the circumstances.

**JURY DEMAND**

Intel and Apple demand a jury trial on all issues and claims so triable.

DATED: November 20, 2019

Respectfully submitted,

By: /s/ Mark D. Selwyn
